

# Microsoft Azure Sentinel Assessment

Gain a bird's eye view across your enterprise with SIEM for a modern world

## Package Highlights

Understand the features and benefits of Azure Sentinel

Gain visibility into threats across email, identity, and data

Better understand, prioritize, and mitigate potential threat vectors

Create a defined deployment roadmap based on your environment and goals

Develop joint plans and next steps

## Experience the Benefits of Azure Sentinel, First-Hand

### See and stop threats before they cause harm with Azure Sentinel

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges—let alone tomorrow's unimagined risks.

That's why Microsoft developed Azure Sentinel, a fully cloud-native SIEM.

Azure Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Azure Sentinel along with insights on active threats to your Microsoft 365 cloud, hybrid and on-premise environments with an Azure Sentinel Workshop.

## Choose the Approach That's Best for You

We know that every organisation is different, so we want to ensure this assessment is tailored to fit your unique environment and goals. To do that, offer two scenarios:

### Remote Monitoring

If your organisation doesn't have its own Security Operations Center (SOC) or if you want to offload some monitoring tasks, we will demonstrate how our dedicated security experts can perform remote monitoring and threat hunting for you.

### Joint Threat Exploration

If your organisation is interested in learning how to integrate Azure Sentinel into your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed.

## Package Objectives

**Experience the benefits of managed monitoring** with a true cloud native SIEM, managed and monitored by your cybersecurity experts.  
(Remote Monitoring scenario)

**Receive hands-on experience**, learn how to discover and analyse threats using Azure Sentinel, and how to automate your Security Operations to make it more effective.  
(Joint Threat Exploration scenario)

## What We'll Do

Analyse your requirements and priorities for a SIEM deployment.

Define scope & deploy Azure Sentinel in your production environment

Remote monitoring\* and proactive threat hunting to discover attack indicators

*\*optional component*

Discover threats and demonstrate how to automate responses

Recommend next steps on how to proceed with a production implementation of Azure Sentinel

## What Will the Outcomes Be?

- ✓ Discover threats to your Microsoft 365 cloud and on-premises environments across email, identity and data.
- ✓ Understand how to mitigate threats by showing how Microsoft 365 and Azure security products can help prevent and protect against the threats that are found.
- ✓ A plan for next steps and information to help build a business case for a production deployment of Azure Sentinel including a technical deployment roadmap.

# Want to Know More?

Identity Experts is a distinguished, UK-based Microsoft Gold Partner, focused on identity access management (IAM) and security.

Since 2014, our passionate team of experts has worked alongside organisations to provide a holistic approach to their technological needs, backed by experience and ever-expanding knowledge, and our partner relationships.

Together, we help to ensure our customers' security, create savings on resources such as time and cost, and underpin further organisational transformation.

With direct links into Microsoft's product engineering teams, we're able to provide best-in-class implementation services, influence product roadmaps, and represent Microsoft Consulting Services and the Microsoft FastTrack team.
