

# DXC Workplace Asset Management

DXC Workplace Asset Management addresses hybrid IT licensing complexity, helping enterprises control software, lower costs and ensure compliance.

## Manage licensing complexity

Traditional IT environments can't match the pace of change in the modern enterprise. That's why a hybrid IT environment is a key element of digital transformation. Yet, these complex environments are challenging to manage.

An experienced, end-to-end IT services partner can help you manage licensing complexity, and DXC Technology is uniquely positioned to be that partner. Our asset management portfolio of services spans the entire software life cycle and provides vendor coverage globally across the spectrum of traditional and disruptive software titles.

## Optimize software investments

Our experts work closely with you to solve complex challenges in ways that minimize your business risk and maximize opportunity. We help you manage and optimize licensing for cloud and hybrid environments, drive software cost optimization, and maintain control and compliance within the software estate.

DXC offers license, subscription and resale management, a full software portfolio, and software asset management solutions. Our specialists support midsize and enterprise organizations, vendors, partners and DXC teams with advice, acquisition, fulfillment, billing, reporting and management services for multivendor volume software. We offer our services directly or embedded in other DXC solutions.

## Key benefits

- Manage and optimize licensing for cloud and hybrid environments
- Unlock cost savings with efficiently structured software agreements
- Improve visibility across software estate platforms, programs and geographically distributed sites
- Gain the resources and support to fully prepare for complex software audits

## Save time and resources

Software is typically the second largest cost in the IT budget, so it's essential for enterprises to derive the most value from their investments.

As a single partner for procurement, licensing agreement management, acquisition, reporting and renewal of enterprise software licensing environments, DXC helps you save time and resources in the following ways:

- Centralize and streamline your software estate to drive operational efficiency
- Continue to reduce costs and optimize spend through license harvesting, pooling and reuse
- Improve the user experience through efficient, self-service fulfillment capabilities — from license entitlements and requests to procurement and deployment

## DXC Workplace Asset Management features

Enterprises across all industries can benefit from the features offered in DXC's asset management solutions. Consider these examples of our success:

**Cloud licensing.** DXC determined the right Microsoft licensing program fit and reduced licensing complexities for a German manufacturing company. We provided contract advice, amendment setup, partner registration and vendor relationship management. We also facilitate an ongoing, seamless billing service for Azure consumption.

**Cost reduction.** DXC conducted a Microsoft software portfolio and life cycle assessment for a Swiss healthcare company in preparation for agreement renewal across 120K qualified devices and server licensing. DXC achieved a renewal discount of 37 percent and enabled the healthcare company to fully upgrade to Microsoft 365 cloud-based licensing for greater flexibility and security.

**Managing complexity.** DXC brokered an interim solution with Microsoft to facilitate the non-disruption of Office 365 users for a U.S. utilities company splitting into two separate legal entities. As their dedicated Microsoft licensing partner, DXC guided the company through the split of their Microsoft assets, the transition to a new enterprise agreement — that aligned with U.S. government community cloud requirements — at the end of the period, and a successful reconciliation on the agreement anniversary.

## Transition with ease

DXC is the partner of choice for enterprises looking to manage the software complexity of hybrid environments. We have deep experience leading large-scale IT transitions. We are ISO-compliant with the 9001 standard for quality management, the 14001 standard for environmental management and the 27001 standard for information security management.

### About DXC Technology

DXC Technology (NYSE: DXC) helps global companies run their mission critical systems and operations while modernizing IT, optimizing data architectures, and ensuring security and scalability across public, private and hybrid clouds. With decades of driving innovation, the world's largest companies trust DXC to provide services across the Enterprise Technology Stack to deliver new levels of performance, competitiveness and customer experiences.
