

DATASHEET

Dynamic Roles

HIGHLIGHTS

Cloudbridge Dynamic Roles allows organizations to enable granular administrative tasks without having to provide native access. The solution helps organizations:

- Assign administrators and help desk staff to roles which control what they can do
- Limit the distribution of privileged credentials
- Generate audit reports on access to sensitive data
- Increase security and compliance within the organization

With the proliferation of systems and data, most organizations cannot keep track of who has privileged access to key corporate data and systems. Most organisations are still trying to manage old on-premise systems while at the same time deploying new cloud-based solutions. Large organisations need to delegate administrative permissions to staff in decentralized departments and remote locations. This makes it very difficult to know who has access to sensitive corporate systems and data. Organisations that expose sensitive data, put their reputation at risk, may lose their competitive advantage, and are subject to large penalties mandated by legislation such as GDPR.

Cloudbridge Dynamic Roles is a cloud based privileged access management (PAM) solution. Cloudbridge Dynamic Roles gives organizations the ability to better manage their environment through a roles-based system. Granular administrative tasks can be assigned to roles. Users holding those roles can then perform tasks with no native access. Cloudbridge Dynamic Roles allows organizations to manage access across different platforms and products from a single console.

Dynamic Roles

KEY FEATURES	BENEFITS
Allows secondary administrators and help desk staff to do tasks without having to grant native permissions	Protects your privileged credentials by allowing delegation of tasks to given roles without granting any native access.
Produces audit report on system access	Facilitates auditing and security compliance by easily producing reports on system access and activities.
Allows automation of repetitive administration tasks	Reduces the workload on administrators and help desk personnel by allowing organizations to automate repetitive or complex tasks.
Provides Single console for both on premise Active Directory and Office 365	Makes IT administration easier by providing a single console that can be used to manage privileged access across systems such as Office 365 and Active Directory.
Cloud based	Simplifies implementation of a PAM via a cloud-based solution that can be accessed from anywhere and requires no software or hardware install.

ABOUT CLOUDBRIDGE

Cloudbridge's solutions re-imagine IT management. By enabling true automation, we empower organizations to reduce their security exposure, reduce their operational costs and embrace new technologies in ways that empower their business.
