

Key Features

Compliant Content Capture

Capture, index and search Teams content from one-to-one chats, multi-party chats, and persistent channels including messages, replies, emojis, GIFs, files, and links

Native File Capture

Capture files uploaded into Teams in their original format, regardless of a user's device, location, or network

Content Monitoring

Define lexicons to flag text and file content, which can be targeted to specific groups. Alerts can then be generated based upon keyword or phrase matches

Data Loss Prevention

Monitor content for potential violations near real-time using parameters set by your organization

Powerful Search

Search for Teams content based on user, date range, keywords, or content tagged to specific cases, events, or topics

Collaborate compliantly

Adoption of Microsoft Teams is growing fast, powered by instant access to everything you need right in Office 365. All your content, tools, people, and conversations are available in the Teams workspace, including built-in access to SharePoint, OneDrive, and Skype for Business. This increases productivity.

For regulated firms, however, use of such rich communication platforms opens the door to risk. Regulated firms must follow the strict compliance and records retention requirements mandated by the SEC, FINRA, MiFID II and others.

Monitor Teams to protect your business

Smarsh Connected Capture for Microsoft Teams provides the near-real-time capture of one-to-one, one-to-many, and persistent Teams conversations. All content can be inspected to minimize potential data loss, mitigate compliance issues and quickly alert reviewers to policy violations.

Reduce e-discovery & supervisory complexity

Teams content is captured in its native format along with tags to related content, providing a complete view into employee activities. All content can then be retained in the Smarsh Connected Archive for easy and efficient e-discovery. Full supervision capabilities are also available to meet the requirements of regulated firms. These include an audit trail that tracks all review sessions and actions taken on specific messages, as well as a purpose-built escalation workflow that routes Teams messages to supervisors for further review.
