

GRAY MATTER ANALYTICS®

LESS INTUITION... MORE EVIDENCE®

CoreTechs®

Our healthcare analytics solutions enable healthcare organizations to quickly access insights around their evolving business needs.

Gray Matter Analytics' CoreTechs® platform leverages cloud-based technologies to deliver foundational and advanced analytics capabilities to healthcare organizations.

CoreTechs® is a cloud-native, subscription-based, data and analytics platform for healthcare providers and payers. The platform ingests data from disparate sources such as payer, provider, pharma and population groups, and external/syndicated systems (payer, HIE, biometric, census).

End-to-end approach – optimizes performance beyond solution implementation

Dynamic platform – flexible frameworks designed to quickly scale

Analytics as a Service – subscription-based model delivers insights quickly

Source neutral – ingests data from disparate sources and standardizes data

Targeted analytics – strategic application of analytics based on specific domains/targets

Ingested data is transformed into useful population health and value-based care insights. These insights are presented through dashboards / reports, predictive insights, APIs, workflow integrations and operational support.

CoreTechs® foundational capabilities enable efficient data management across siloed data assets and creation of patient- and physician-centric views needed to support population health analytics and performance management.

CoreTechs® advanced analytics capabilities leverage machine learning to provide predictive and prescriptive insights, patient risk stratification, cluster analytics and financial performance predictions.

CoreTechs® conducts multifactorial analysis on disparate data sets, delivering a full range of analytics that connects organizational performance to predictive insights, in order to drive positive impact.

GAIN INSIGHTS FROM ANALYTICS-READY DATA FUELED BY NATIVE CLOUD TECHNOLOGIES AND ADVANCED MACHINE LEARNING.
