

# Passwordless Authentication

## Passwords have become a modern security risk

An average person has 97 passwords between work and home  
Employees share passwords between applications  
Phishing attacks are the most common attack vector  
Password resets are the single most common helpdesk category

**Say goodbye to passwords forever with Passwordless Authentication**

## Our service delivers these valuable outcomes

- ✓ Passwordless authentication to Windows 10
- ✓ Passwordless authentication to all Microsoft Office 365 apps
- ✓ Passwordless authentication to SSO compliant SaaS apps
- ✓ Passwordless authentication to eligible on-premise apps

## How it Works

# 1

### Step One

Discovery and Design

# 2

### Step Two

Implement and Demonstrate

# 3

### Step Three

Knowledge Transfer

“ I don't think I've typed a password or had to do a password reset for month – and I don't miss that nuisance. Now my laptop authentication experience is just as smooth as my iPhone. ”
