Getting Started x

## Getting Started with Alpaqa Studio

Your management studio for Cosmos DB

### First Steps

- Attach Your Cosmos DB Account**  
Choose any Cosmos DB account from your [Azure subscription](#) or use a [connection string](#). Attached accounts will appear in the [Cosmos DB Accounts](#) tab for instant access.
- Open a Container**  
Once you've attached a Cosmos DB account, you'll be able access its databases and containers from the [Cosmos DB Accounts](#) tab. Open a container with a simple double-click.
- Change Your Color Theme**  
With your Cosmos DB and Alpaqa Studio in the cloud, you can access your database anytime, using the [light](#) or the [dark theme](#).
- Check Our Roadmap**  
[The Alpaqa Studio roadmap](#) will regularly deliver robust productivity tools and features your team time when working with Cosmos DB. But many key feature ideas will come directly from you, the user. [Get in touch](#) with the product team behind Alpaqa Studio and tell us what you need.

### How to

- Query Data**  
You can navigate the data stored in a Cosmos DB container using the Tree, Table, and the JSON views. The query is preset to a `SELECT * FROM c` statement, but you can modify the WHERE clause in the query section. Remember to use the `c.` as a prefix in your queries. [Show me how to do this](#)
- Edit Data In-Place**  
You can edit data in your Cosmos DB in the Table and the Tree views. Simply double-click on an entry you'd like to modify and type in a new value. A [right-click](#) offers a range of more advanced operations.

# Alpaqa Studio

## Roadmap

### Query and edit data faster | Available Now

- Table, Tree, JSON View
  - Visual Query Builder
  - Discover field frequencies / data distribution
  - Edit data in place and in bulk (RU throttling supported)
- **PLUS:** Copy-and-Paste of Cosmos DB Containers

### Import and export with ease | In Development

- From and to Cosmos DB containers
- From SQL databases
- From and to files (CSV, JSON, Excel)

### Monitor and tune performance | In Design

- Identify slow queries and hot partitions
- Query Optimization / Index Advisor / Partition Key Advisor
