

# Arbela Rapid Deployment for Fixed Assets

## A deployment service from Arbela, a scalable solution for you

Fixed assets (such as structures, equipment, and land) are everywhere in a business. Yet many businesses do not have a sound fixed asset management strategy to streamline business operations.

The catch is their costs, depreciation and applications vary wildly across most every department—which means tracking purchases, financial data, and other “asset-metrics” that impact your bottom line is often done differently in each department, and often manually as well.

But when you extend Microsoft Dynamics 365 Finance with the Fixed Asset module, you streamline, codify, and optimize the means of managing and measuring most every aspect of all fixed assets.

Arbela Rapid Deployment for Fixed Assets service helps you make the most of this critical module quickly, empowering you with a solution that improves data accuracy and availability, and that is easily scaled across every department and location.

The experienced Arbela team has a track record of success in executing the end-to-end process. With this new service, you'll reduce the cost of updating and integrating fixed asset posting with the Dynamics 365 platform, and enjoy full asset tracking,

reporting and auto-posting in a reporting and auto-posting in a fraction of the typical implementation time and cost.

### A blueprint for repeatable success

This rapid deployment service for Fixed Assets is built on tested templates for data migration to ensure that data can be transferred into Dynamics 365 quickly and efficiently.

This expedited implementation offers customers the ability to quickly configure the fixed asset module for a single entity then duplicate the configurations in other legal entities. Specific updates can be made per entity as needed to address local depreciation methods or tax postings.

The service includes the following:

- Import all setup and configurations for single or multi legal entity scenario
- Post-acquisition values and catch up accumulated depreciation of all fixed assets to match against legacy system
- Restore system configurations to original state for future processing
- Validate asset values and future calculating depreciation using out-of-the-box reporting tools in Dynamics 365 Finance

### Benefits

- Reduce time to implement and quickly roll-out globally
- Enable complete and accurate financial reporting across entire organization
- Integrate asset management system with ERP

### Deliverables

- Configured single or multiple legal entities for asset management
- Validated data set of Fixed Assets
- Future depreciation calculations matching legacy system
