Data Loss Prevention

Protect Customer Data | Prevent Accidental Data Loss | Limit Data Exposure

Prevent sensitive data sharing and ensure compliance without impacting productivity.

With M365 Data Loss Prevention, you can gain visibility into data usage and movement across your organization and dynamically enforce security policies based on content and context. M365 Data Loss Prevention technology will address data-related threats such as accidental data loss and sensitive data exposure with monitoring, alerting, and blocking your infrastructure and application.

With Data Loss Prevention, your organization can:

- Show a pop-up policy tip to the user that warns them that they may be trying to share a sensitive item inappropriately.
- Block the sharing and, via a policy tip, allow the user to override the block and capture the users' justification.
- Block the sharing without the override option.
- Notify administrators when sensitive information is contained in email and files.

63% of Organizations fear Data Leak / Spillage during the Pandemic.

Microsoft COVID Security Priorities Survey 2020

Deliverables

- ▶ Data Loss Prevention workshop
- ▶ Completed review of built-in sensitive information types
- ▶ Up to 4 sensitive information types selected and thresholds identified
- ▶ Up to 3 DLP policies created
- ▶ DLP functionality validated
- ▶ DLP policies deployed to pilot users
- ▶ Assistance provided for production deployment
- ▶ DLP policies documented

KiZAN will assist your organization with the implementation of Data Loss prevention for Exchange Online, SharePoint Online, and OneDrive for Business.
