

# Managed Disaster Recovery

## Protecting your business when it matters most

### Customized disaster recovery solutions to keep your business running

When your IT team is already strapped for time and resources, implementing and maintaining the kind of robust disaster recovery plan needed to keep your business safe often seems out of reach. From assessment to implementation and monitoring to testing, our tailored solutions will fully protect your business from costly extended downtime and allow your team to focus on strategic business initiatives.

The CBTS Managed Disaster Recovery solution can keep your business running when the unexpected strikes. It's disaster recovery, covered.

#### End-to-end disaster recovery protection

CBTS Managed Disaster Recovery solutions provide your company with a fully managed testing program and recovery service that includes:

- Exercise coordination and planning, logistics and project management.
- Consumption-based and flexible support in the time of need, including IT staff and compute support.
- Fully documented recovery plan and annual testing.
- Post-test reports with results and recommendations.
- A letter of attestation of disaster recovery exercise performance and success.
- Targets of either CBTS data centers or Microsoft Azure.

#### CBTS is your trusted disaster recovery partner

Our team of disaster recovery experts will work with you to create a managed disaster recovery solution that meets all of your business needs. Your tailored solution will include:

- A fully managed end-to-end disaster recovery solution that has no impact on your production workloads and is easy on your team.
- Tested and proven to work with tailored RTO and RPO.
- Customized journaling duration and target locations.
- Full protection from costly extended downtime in the event of an unforeseen failure.

## Did you know CBTS also offers Disaster Recovery Assessments as a service?

Every business is unique in terms of the data and applications that are mission critical to your brand and bottom line. Disaster Recovery Assessments from CBTS help document your current environment and identify what is most important to you and together we create a recovery solution that meets your RTO and RPO objectives while staying within your budget. Our assessment process includes:

- Conducting staff interviews and developing recovery requirements and tiering your recovery times.
- Collecting, analyzing, and verifying IT environment data.
- Discussing best practices, covering strategic direction, applications, and processes.
- Compiling recommendations including a well-defined, strategic roadmap for Disaster Recovery which is detailed in the solution recommendation documentation.
- CBTS is here to help with the migration, setup, testing, documentation and ongoing monitoring and management.

## How it works

CBTS will build a secondary site for Disaster Recovery in one of our facilities, in a 3rd party colocation or within Microsoft's public cloud Azure. Data will then be mirrored from your primary production environment for ongoing site replication. The recovery process for your unique environment is documented and tested to be successful. Upon completion, a Letter of Attestation is provided illustrating your success.
