

Avalanche TTX

Exercise & training software

Bring your exercises and training to life. Simply.

Avalanche TTX is an easy way to design and deliver scenarios for your exercises and training. It combines a powerful scenario design environment with immersive presentation features and sophisticated after-action review & reporting.

Avalanche TTX has been custom built for emergency management and public safety professionals, with wide application in other sectors.

The software is extremely easy to use, making the design, delivery and review of your tabletop discussion exercises an engaging experience, both for the facilitator and the participants.

About the software

Avalanche TTX works by allowing you to design media-rich scenarios and then play them back during an exercise, either in one room, multiple rooms via your local network, or multiple locations via the Internet.

The results of scenarios are tracked, and made available for review and assessment. Avalanche TTX then helps you to assess the results. The results of assessment can then be collated into reports or used within the software for debrief with participants.

Benefits

- **Easy scenario design and delivery, allowing** exercises to be run regularly
- **Reduced time and effort** by trainers, facilitators and assessors in exercise management and producing after-action reports
- **Portable.** Install on-site or as a portable multi-seat exercise system on the road
- **Consistent** and repeatable exercises across multiple participant groups
- **Your scenario library** can easily be built and shared, retaining organisational knowledge
- **Run scenarios across different sites.** Train and exercise in one or multiple locations with Avalanche TTX Server
- **Share scenarios** around your organisation for simplicity and consistency. Or with Avalanche TTX Server, keep all your exercises and multimedia in one place for your entire organisation
- **Detailed evidence** of your preparedness initiatives is automatically retained
- **Activities can be customised to local requirements** to keep them relevant and engaging
- **Low annual cost**, scalable and expandable
- **A best practice methodology** for scenario training

Incredibly user-friendly

Despite being very powerful and flexible, you won't need a degree in computer science and a film crew to create great scenarios in Avalanche TTX.

It just works

No more messing about with videos not playing back in your presentations. Simply plug in a projector, and let Avalanche TTX help you to get started.

Secure

Avalanche TTX uses modern encryption standards to ensure that all communications and storage is secure.

Build your own scenario library

Powerful scenario building capabilities let you create a library of the types of situations your organisation faces, so your people can be better prepared for whatever the world throws at them.

Avalanche TTX

Features

Rapid scenario creation

Build your own scenario library in minutes. Drag and drop injects to recreate the stimuli your people would experience in real situations, bringing a compelling sense of reality to your exercises.

Centralised management and sharing of scenarios and results

With Avalanche TTX Server, all your scenarios, media and results are accessible anywhere, allowing you to share design and review tasks among team members and make scenarios available anywhere in the world.

Easy facilitator controls

Controlling the presentation and group discussion is easy. Avalanche TTX manages your time, keeping you to schedule and letting you know what's coming up next. With the free Avalanche TTX Remote app for iOS devices, you can control the exercise from anywhere in the room.

Single and multi-location training delivery

Optionally run exercises across the Internet or your network, adding video/audio conferencing and multi-site whiteboards to your exercises.

Compelling Injects

Build up your scenarios with immersive phone calls, radio broadcasts, explosions, briefing videos, emails, text messages and more.

Electronic Whiteboards

Create an unlimited number of virtual whiteboards for sharing ideas, actions and strategies. Show them in one location or with Avalanche TTX Server collaborate with other locations on one whiteboard or break-out into groups for brainstorming sessions on separate whiteboards.

Focussed after-action review and assessment

Review recordings of group discussions, whiteboards, and other observations. Jump directly to a topic and play back what was said. Provide feedback in the form of comments, annotations, ideas and lessons learned.

Automatic Debrief Reports

Following an after-action review, print out an automatically generated report containing a summary of the discussion topics, along with any feedback, observations and other commentary provided by reviewers. Distribute these reports to stakeholders as a permanent record of the exercise. Avalias can customise reports that allow you to automatically populate the results of your exercises into your own Microsoft Word report templates.
