# AVA Mobile

Access AVA anywhere, anytime. Our purpose built, native Android and iOS apps give full access to your AVA system.

- Report incidents any where, any time
- Conduct audits on the go
- Work online or offline
- Designed for ease of use and increased user adoption

## Native iOS and Android Apps

AVA Mobile uses advanced technology to bring you apps that are purpose built for the iOS and Android operating systems, while maintaining just one code base. This means our developers can bring you regular updates including product improvements and security updates - with no input required from you.

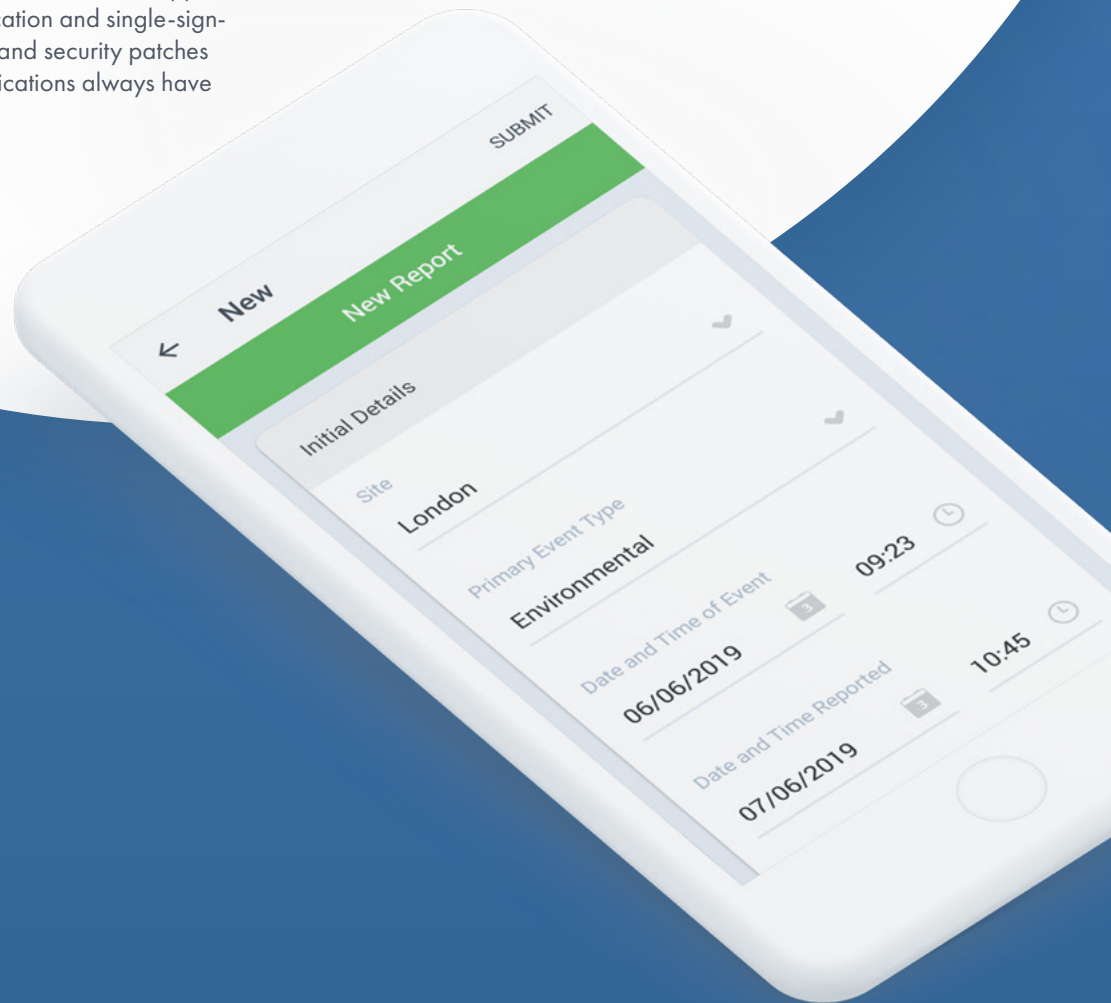

## Security by Design

AVA is built using the principles of security by design and nowhere is this more important in our mobile app. Features such as 2 factor authentication and single-sign-on protect users. Regular updates and security patches ensure servers and back end applications always have up to date security.

## Configurability Guaranteed

AVA Mobile offers you the ability to tailor the mobile experience of your users. For example, you may wish to use different forms for mobile incident reporting, compared to desktop incident forms.

Similarly, you can use a shorter audit form for mobile users, and then expand on the desktop version.

## Key Benefits

### Increased User Adoption

Like all AVA modules - AVA Mobile is designed with ease of use at its core. Easy to use systems are more likely to be utilised to report incidents and even near misses.

### More Accurate Incident Reports

The AVA mobile app allows you to record incidents at source. Take witness statements, pictures and videos to accurately record events. Use first hand evidence to support analysis and findings.

### Work Online. Work Offline

AVA Mobile works beautifully when connected to the internet. It also works beautifully when no connections are available. Continue working and the new data will automatically sync to AVA when a connection becomes available.

### Scalable Productivity Improvements

Conduct audits once. Use the AVA mobile app to record audits directly into AVA. Reduce work duplication. Reduce paper waste. Reuse audit templates time and again to scale productivity gains across your organisation.

# Key Features

## Anywhere. Any Time

- Access AVA from any device. Any time
- Purpose built iOS and Android apps
- Single code-base ensures regular security and functionality updates

## Incident Management

- Record incidents at source
- Easily attach media, photos and videos stored on your mobile device
- Record first-hand witness statements

## Audit Management

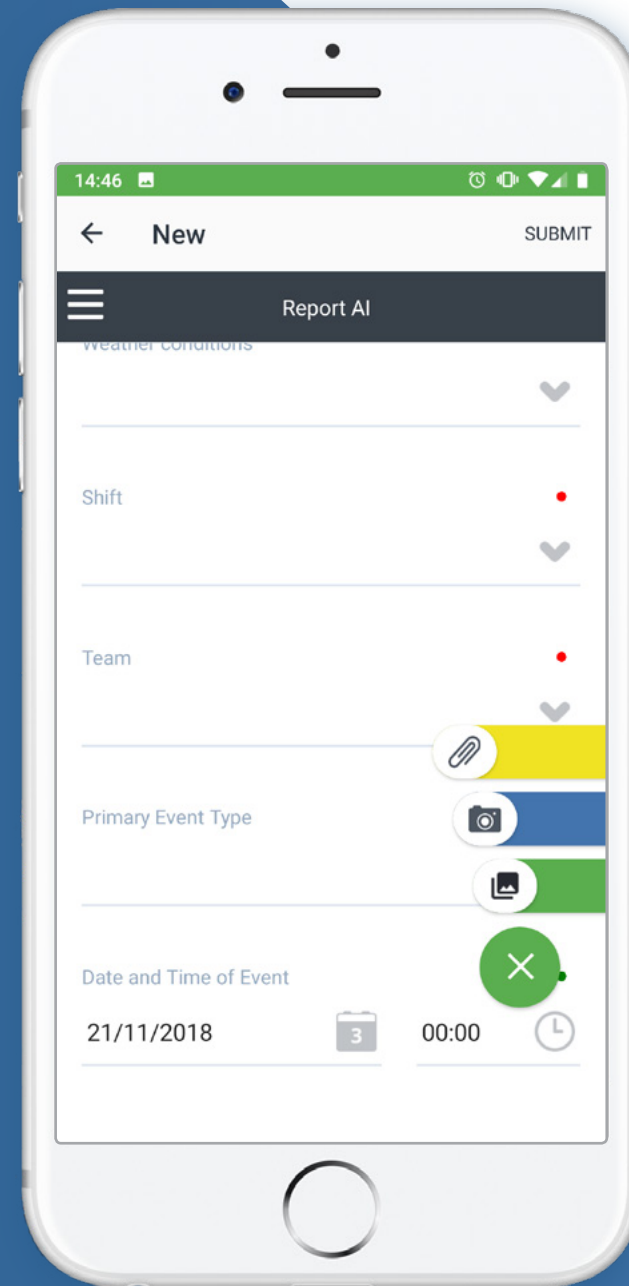

- Conduct audits directly into AVA
- Reduce work duplication and paper waste
- Assign corrective actions
- Track actions through to completion

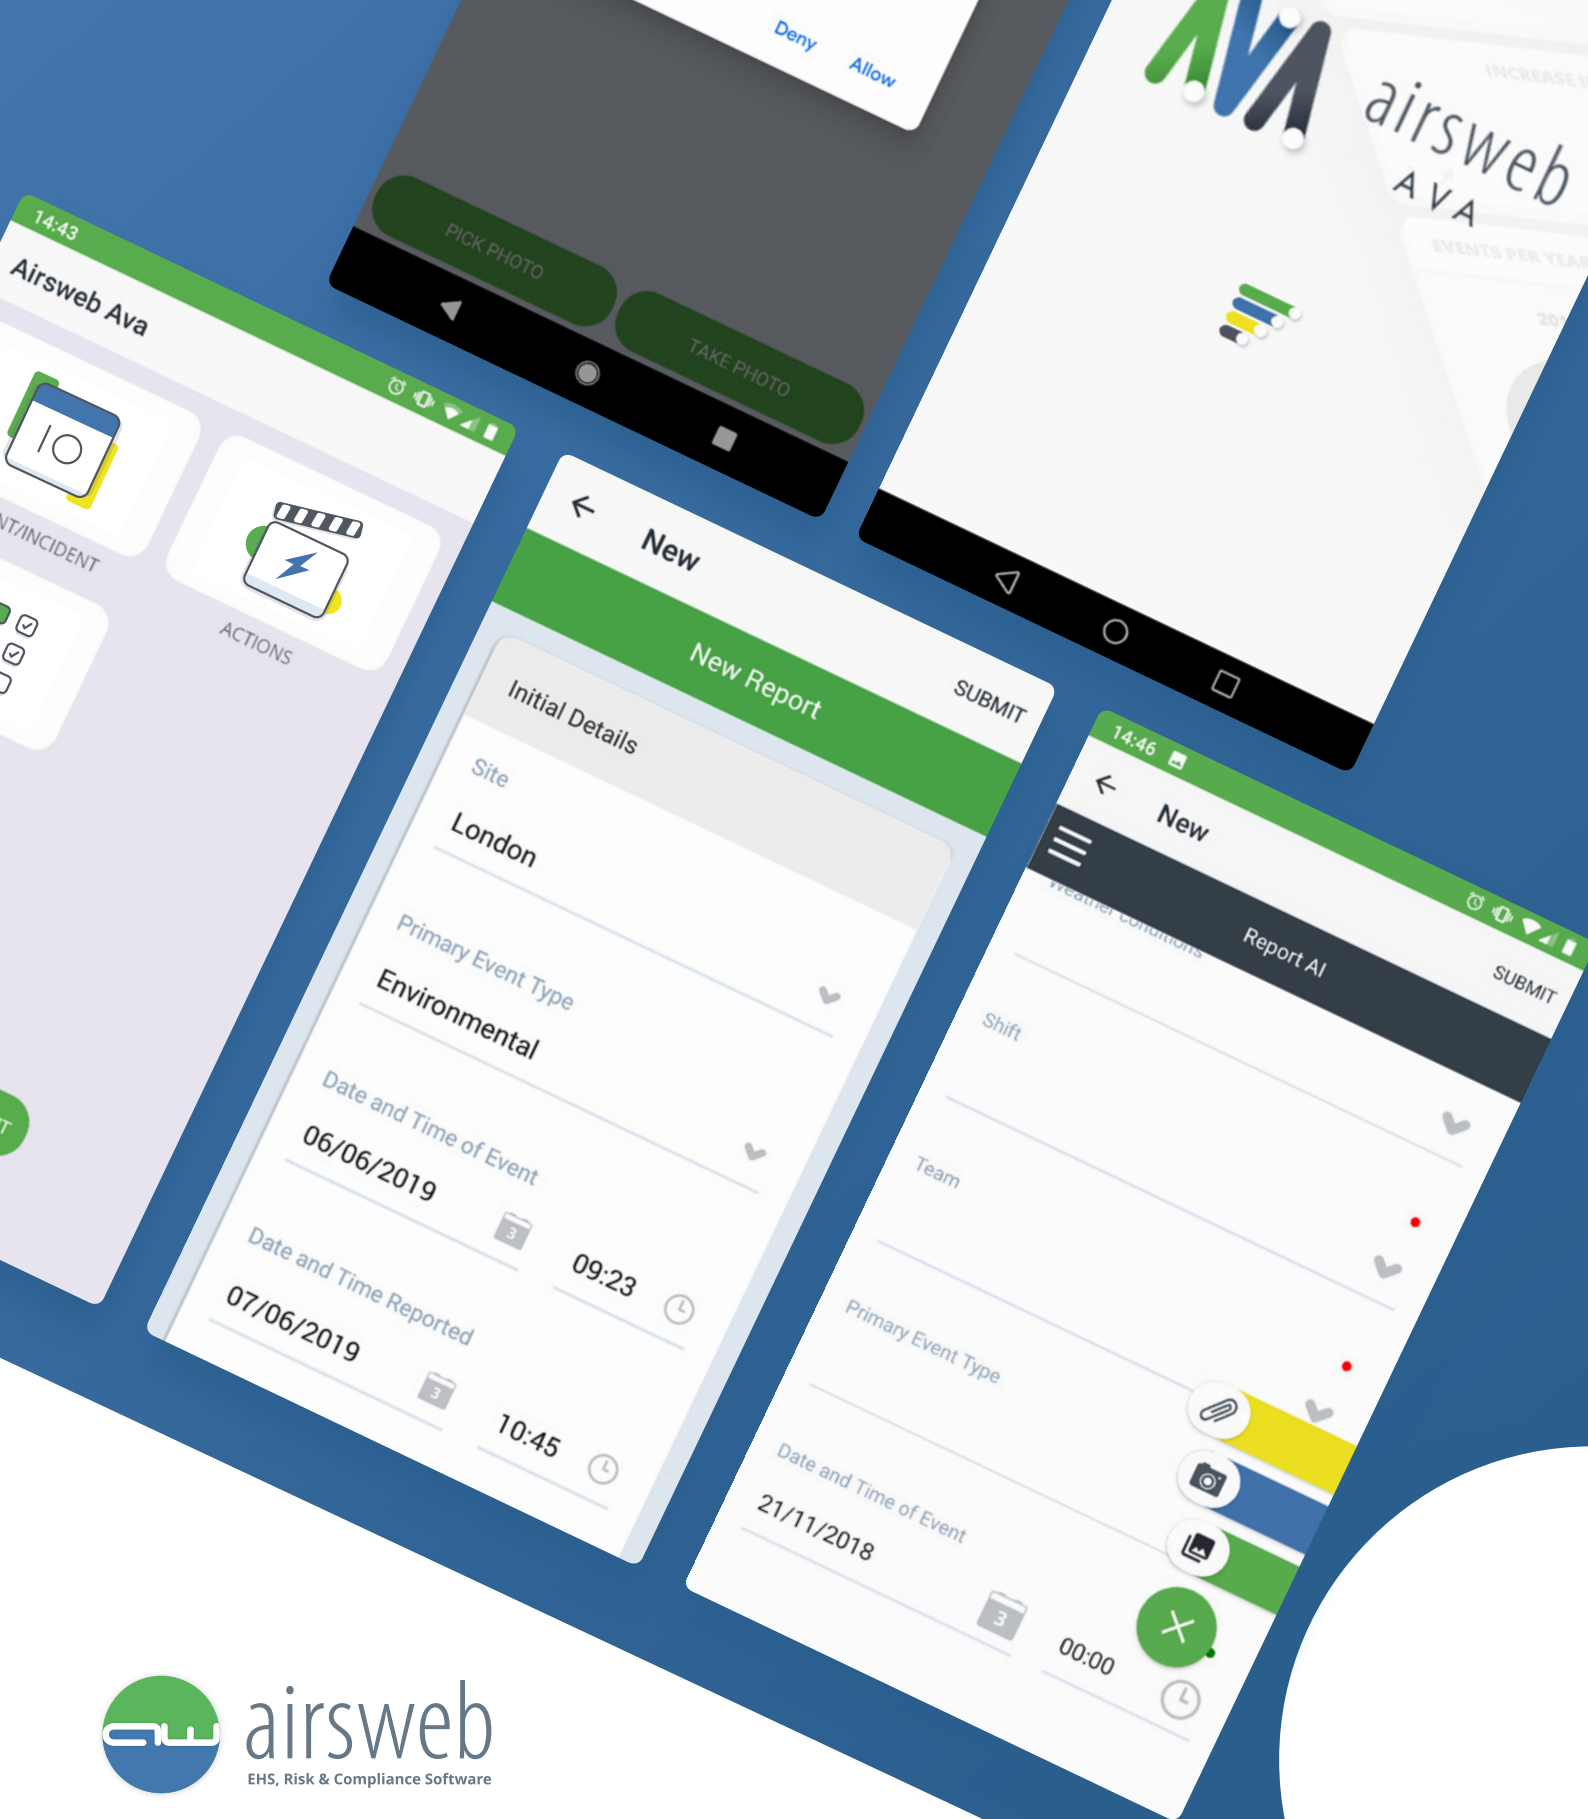

## Offline Working

- Continue working - even when no signal is available
- Sync your work automatically to AVA when connections are available
- Perfect for remote or loan workers

## Coming Soon

- Behavioural Based Safety - Pinpoint at-risk behaviours and track actions to drive real behavioural change
- AirLens – The “Instagram” for safety reporting
