

Dataverse Capacity Management Briefing

Microsoft's Dataverse (formerly Common Data Service) is a leap ahead for business applications. It is much more than just the relational database underpinning your business applications. Dataverse has the potential to be the most critical component of your "Data Estate". But, just like any other data store, it can become corrupt, unusable, or costly. Fortunately, there are options to keep this from happening.

Purpose of this Briefing

This no-obligation informational briefing is designed to review your options to reduce capacity costs for Microsoft Dataverse environments including Dynamics 365 Sales, Dynamics 365 Customer Service, Power Apps and any other Power Platform services that run on top of Dataverse.

Deliverables

What does this Briefing include?

- Review your Dataverse environments
- Discuss your current goals and limitations
- Review the alternatives and approaches to reduce capacity costs
- Review the licensing options and costs
- Discuss the "Citizen Developer" capabilities
- Discuss potential costs and time
- Provide you with links to specific resources based on the discovery
