

CLOUD PROTECT

With the heightened threats surrounding the security of cloud accounts, we decided to take the matter into our own hands to keep our customers as safe as possible, and that's how Cloud Protect was born.

Monitors Login Activity

Intelligently alerts RyanTech support and your I.T. team of suspicious login activity.

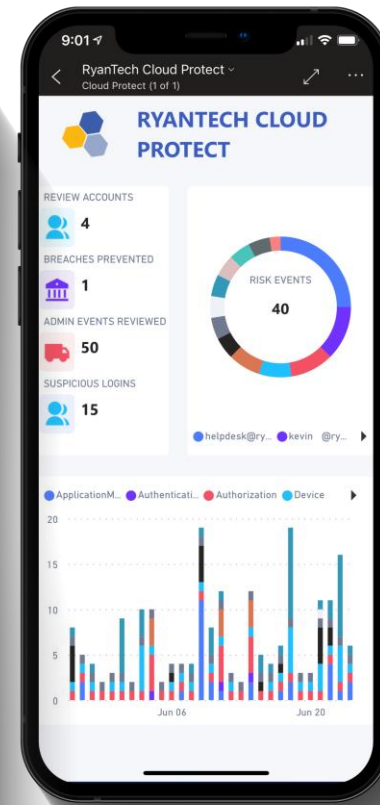

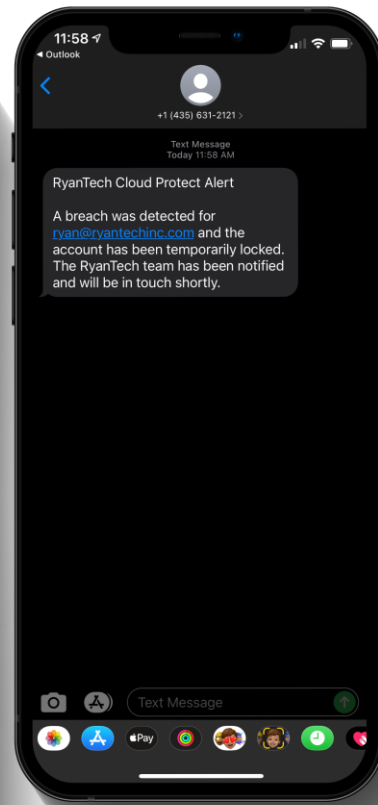

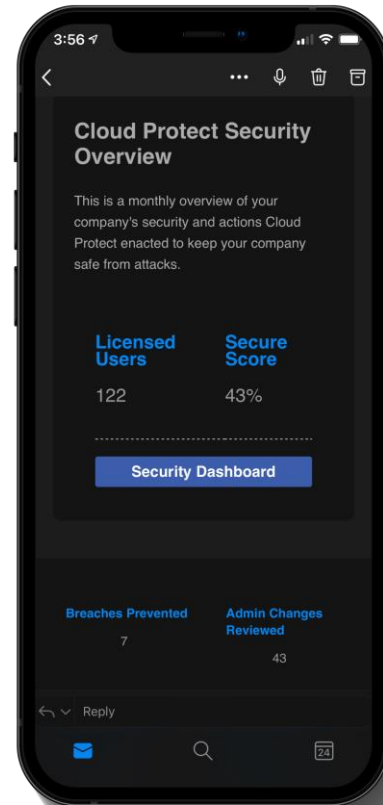

AI Watchdog

Artificial Intelligence watches all logins and admin changes on your tenant to detect any bad actors.

Monthly Security Overview

You will receive monthly security overview emails identifying areas of weakness in security that the RyanTech team will focus on improving.

Bring Your Own Data

Integrates with custom applications, other authentication providers and even on-premise data.

Optional Automation

Automatically take action with high risk detections including: locking breached accounts, require password reset, additional MFA prompt and more.

RyanTech Monitoring

Cloud Protect reinforces the RyanTech support team to extend their assistance into proactive monitoring for all your users security.
