

# Supercharge your Snowflake Data Cloud

Unlock your full potential with Matillion's cloud-native data integration platform

Matillion ETL for Snowflake helps data teams get things done faster in the cloud. Unlock the value of your data cloud today with low-code data ingestion, transformation, and Snowflake platform control.

01

Extract, load, and transform your data without sacrificing sophistication or speed.

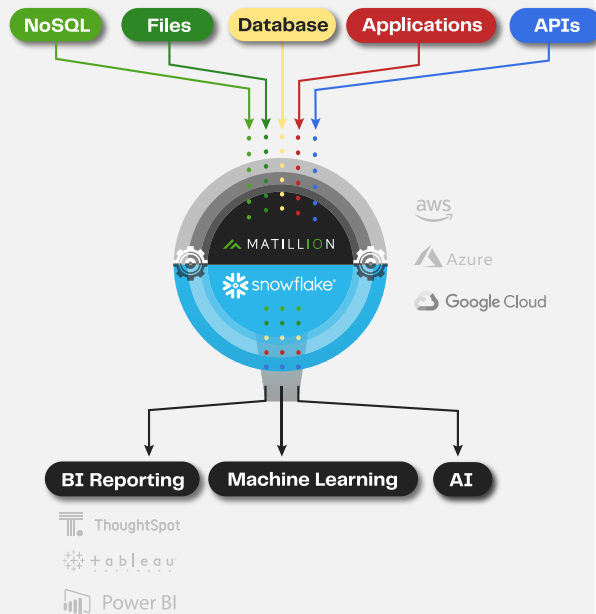

02

Maximize Snowflake performance with cutting-edge platform integrations.

03

Easily meet data security and sovereignty requirements in any region of the world.

"Such speed, so easy to learn! I can onboard new staff and have them understanding our data flows very quickly."

## Matillion and Snowflake: Better together

- \* Load and flatten JSON data
- \* Create and manage external tables
- \* Control time travel
- \* Start table streams
- \* Build and refresh materialized views

### The Matillion difference:

#### Easy to use

Stop fighting with antiquated UIs or unwieldy blocks of code. With easily approachable, low-code interfaces and powerful under-the-hood customization, get more people using and transforming data across your organization.

#### Built for the enterprise

Modular deployment options help hundreds of enterprises accelerate their cloud modernization programs. Matillion ETL's stability, security, and white-glove support lets them move with purpose and speed.

#### Built for the cloud

Some solutions are ported to the cloud. Matillion ETL was born in it. Leverage all of the native features and advantages of Snowflake through our custom-built push-down integration.

#### Transformative value

Matillion ETL for Snowflake helps data teams deliver continuous value back to their customers and organizations. Our fast-start pricing will have you up and running in minutes.
