

Azure Establishment

Empired's 3 steps to Azure MSP

Customers starting or already started their Journey to Azure may have difficulty getting up to speed with the networking, security, design architecture and ongoing management options. Azure Establishment would speed up deployments by deploying standard & best practice solutions.

What is Azure Establishment?

It should be the first step in your journey to the cloud. Azure Establishment is based on structured design, providing the blueprint for teams to follow to deploy future solutions in a rapid manner and with confidence. The Establishment can be followed to ensure an optimal outcome, regardless of which Azure components they wish to deploy.

Why Azure Establishment?

- + Confidence to deploy applications into Azure
- + Speeds up deployment of Azure resources
- + Provides a foundation for all subsequent Azure deployments

Reduces Azure bill shock

How is this achieved?

- + Use best practices to create a fault tolerant environment
- + Automation used to deploy environment
- + Major design decisions already taken care of

Structured design

Why our customers use Azure Establishment:

- + Discovery workshop to gather information to allow deployment
- + Fast creation of Azure environment
- + Allows agile deployment of Azure resources
- + Caters for disaster recovery

Secure environment

What are the features?

- + Makes Azure easier to manage
- + Standardised environment
- + 99.99% uptime
- + Governance
- + Fits all Azure subscriptions
