# SENSIGHT™

Sensyne Health

The global real world patient data analytics platform for life sciences and healthcare research

SENSIGHT is the first data analytics platform to provide industrial scale access to insights from anonymised and de-identified real world data across multiple therapy areas, combined with built in simple to use research algorithms.

The platform provides life science professionals, medical research academics and clinicians with instant access to AI research capability to analyse health insights across a curated common data environment, without compromising patient privacy.

Welcome to SENSIGHT™

Longitudinal Real World Data from multiple healthcare partners

| Rich datasets drawn from diverse populations, curated by ML experts | De-identified and anonymised patient data (EHR, imaging and -omics) |

SENSIGHT™

Secure, rapid, AI enabled data analytics platform

- Proprietary analytics tools
- Single user access
- Common data models

- 10m patient records (by end 2021)
- Multiple therapeutic areas
- Powerful analytics, affordable price

Use cases for life sciences

- ✓ Synthetic control arms using longitudinal EHR data to support clinical trials
- ✓ Patient stratification using longitudinal EHR data to support clinical development
- ✓ Support for drug launch and reimbursement strategies
- ✓ Analyses of disease progression & image quantification
- ✓ Support for target identification by combining longitudinal EHR and genetic/genomic data sets

Use cases for healthcare (currently in development)

- ✓ Support for routine clinical practice and performance measurement
- ✓ Patient pathway tracker
- ✓ Referral service for clinical trials
- ✓ Support for algorithm development and testing
- ✓ Development of real time decision support tools
- ✓ Access to analytics tools for clinical research

sensynehealth.com/sensight

Benefits
- Unrivalled, easy and affordable single subscriber pricing

- Access to insights from deep, highly curated longitudinal real world data across multiple diseases

- Precision analytics tools for life science and healthcare use cases

- Reduced clinical trial attrition by quickly assessing feasibility

- Reduced cost and duration of clinical trials by optimising trial design

- Accelerating discovery and development of new drugs

- Refining market access strategies for new or existing drugs

- Referral support for companies interested in clinical trials

- Connects international professional collaboration across the life-sciences and healthcare sectors to drive improved patient care, reduce costs and accelerate medical discovery and development

Subscriber model

£25,000 per person per year

Additional products are available to SENSIGHT subscribers, for specific research projects*.	Additional services are available to support your specific research needs*.
Biomarker search	Additional data for synthetic control arm trials
Image quantification	Synthetic imaging control arms
Outcomes based pricing data tracker	Complex patient stratification
Algorithm development and testing services	Bespoke analysis of real world data

*Fees will be costed on a project-specific basis

Protecting patient privacy

We know patient data is precious so protecting it is our first priority. We never share data. We never sell data. Data never leaves Sensyne.

The platform instead rapidly interrogates Sensyne's deep diverse datasets and delivers intelligent analytics and data-driven insights, not the data itself. It does not allow SENSIGHT users access to any patient data directly.
