iServer365: The SaaS Enterprise Transformation tool built on Microsoft Office 365

iServer365

iServer365 Engine

SaaS, multi-tenant application

Core and flexible metamodel options

Alignment to architecture standards

Connectivity via REST API

Microsoft 365 Ecosystem

SharePoint Document Repository

Collaboration in Teams

Modeling in Visio

Visualizations in Power BI

Outcome-Driven Transformation

Cloud-based solutions catalogue

Support for 28 common transformation use cases

Continuous (evergreen) solution upgrades

Self-service provisioning of solutions

Business Process Analysis

Transform business performance with cross viewpoint, cross function analysis, including full support for BPMN

Strategic Portfolio Management

Bring repository data to life with iServer's SPM functionality, addressing business questions for the application, technology, business, project and data portfolios

iServer365
Core Disciplines

Enterprise Architecture

A powerful Enterprise Architecture platform with support for the major metamodels and frameworks, including TOGAF, ArchiMate, UML, and IT4IT

Governance, Risk & Compliance

Manage IT governance and risk while ensuring business and regulatory compliance, with support for frameworks including COBIT, ITIL, SABSA, and GDPR

Leverage the Microsoft 365 Ecosystem

Enterprises globally are moving to Microsoft 365

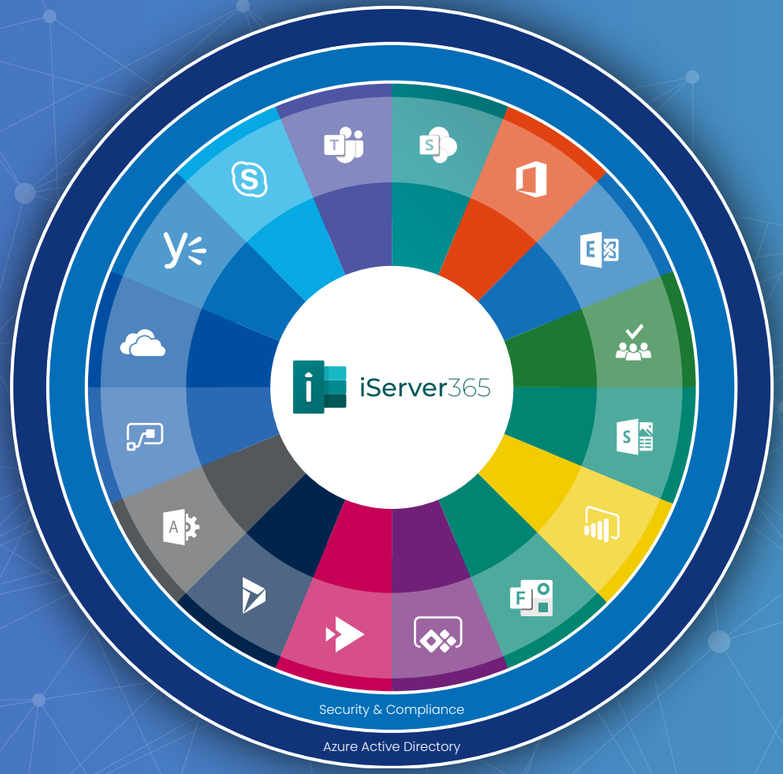
200 million active users and rising worldwide

3 million new active users per month

Adopted by **80%** of large enterprises

Adopted by **90%** of fortune 500 companies

Microsoft 365 accelerates productivity with a range of enterprise-grade, flexible, and secure applications that are highly intuitive. That's why iServer365 was built from the ground up to work with these applications.



SharePoint Document Repository

Store work in native Office formats, with iServer365's SharePoint-based document repository. Communicate deliverables and transformation outcomes to stakeholders in a truly engaging way, utilizing modern SharePoint sites.

Collaborate in Teams

A unique teamwork experience for enterprise architecture and transformation projects that centralizes day-to-day work in iServer 365 around dedicated Teams groups, channels, tabs and personalized bots.

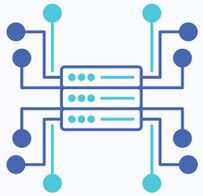
Model in Visio

The iServer365 add-in for Visio enhances the market-leading diagramming tool, enabling the re-use of objects and relationships, scaling of work with multi-user functionality, and validation of diagrams against common standards.

Visualize in Power BI

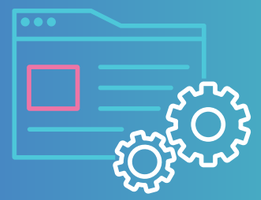
Quickly generate compelling reports and dashboards from data in your iServer365 repository, share insights on key enterprise portfolios and enable informed, actionable decisions.

iServer365
Core Capabilities



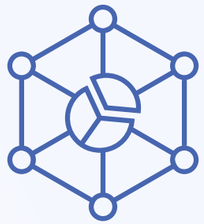
Central Repository

A web-based, central repository manages all your enterprise content, providing a single source of truth for collaboration and strategic decision-making



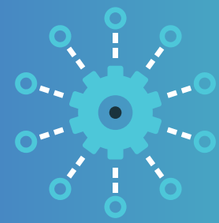
SharePoint DMS

A unique SharePoint document repository removes barriers to adoption by providing familiar Office interfaces, enabling the leverage of existing document collaboration



Modeling

Best-in-class Visio Integration provides a powerful modeling environment, featuring unique flexible mapping options and ready-made Viewpoint templates



Metamodel & Frameworks

Out-of-the-box EA framework support, supporting any standard or notation and an easily customizable metamodel

Decision Analysis

A range of built-in repository views and graphical visualizations offer unparalleled support for architects to analyze and maintain the repository

Presentation

Guide and inform stakeholders with an enhanced document viewer and a fully customizable SharePoint site, with easily shareable pages

Collaboration

iServer365's SharePoint site enables data gathering from all parts of the business, while the Solutions Hub provides ready-made surveys and integration with Teams

Reporting

A set of Power BI dashboards and visualizations that can be easily published to the iServer365 SharePoint site for rapid stakeholder involvement

Integration & Interoperability

Integration solutions with a variety of 3rd party systems are available out-of-the-box, with a comprehensive REST API enabling further integrations

Security

Azure Active Directory provides detailed user management features, including the creation of assignable roles to give access to specific features

iServer365 Supports a Comprehensive Range of Transformation Use Cases

8 Core Use Cases

Application and
Technology Roadmapping

Application
Rationalization

Integration
