

Help for Caseworkers

When a child needs a place to stay, agencies must act quickly to identify all suitable options. Foster care organizations need access to foster parents, kinship placements, group homes, halfway homes, and many more resources—at a moment's notice.

Diona Placement Finder, a commercial-off-the-shelf (COTS) mobile enterprise solution, provides caseworkers in the field the critical information—and context—they need to address urgent alternative care resource issues. The solution also helps caseworkers pro-actively find and retain stable placements and diffuse conflict situations with respite options to ultimately support permanency, safety, and well-being.

The Diona Placement Finder is a smartphone- and tablet-enabled application that allows alternate placement providers to:

- Increase opportunities to enhance placement stabilization by providing access to relevant, child-critical information to caseworkers when they need it
- Improve the speed with which caseworkers notify the system of record (SOR) about placement initiations, movements, and terminations
- Leverage mobile device technology, such as GPS, to provide contextualized information about available resources based on the location and needs of a child or children

Minimize disruption

Moving to a new placement is often a traumatic experience for a young person in care, involving a complete disruption to their everyday lives. By enabling the caseworker with access to placement resource information while working in collaboration with the placement coordinator, Diona Placement Finder provides for a smoother process for the young person and the caseworker—from within the field.

Enhance placement stabilization with better information

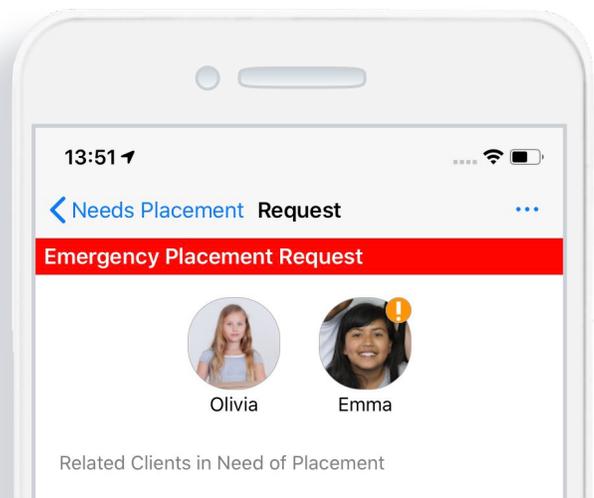

Having access to placement resource details is vital to providing the best care location for a foster child. Caseworkers need context-specific information to ensure they're providing clients with a safe, secure, and stable environment for long-term support and well-being.

With Diona Placement Finder, critical information and data are

immediately accessible in the field through a mobile device—history of children in care, background checks, licensing violations, previous allegations against and towards individuals in the home, all of which is essential to understanding the appropriateness of the placement.

Engage in real-time communication, data exchange

Diona Placement Finder gives the caseworker mobile access to potential providers through real-time communication such as SMS, phone calls, and video chat. The caseworker can also access details of currently placed foster children within the home, enabling better decision-making as to the appropriateness of placing another child.

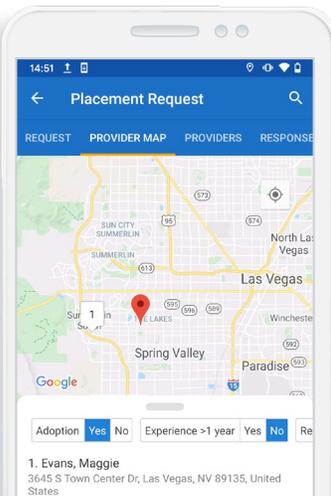

Configure robust search filters

Configurable filters allow the caseworker to identify resources based on the most relevant characteristics and parameters to consider when determining a potential placement resource. Multiple filters such as number of available beds, cultural understanding or knowledge, and training in specific areas of behavioral need, speed up the process and ensure the caseworker has access to the right information.

Increase speed of placement notifications and actions

Diona Placement Finder allows caseworkers to quickly notify the system of record of a new placement. This information can be captured as part of a form or directly passed to the system of record to initiate agency-specific business processes and workflows. All can be done from the caseworker's mobile device while in the field, increasing the speed and accuracy with which placement data is available to others in the agency.

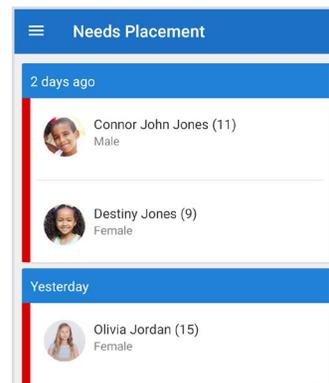

Main features

- Access all capabilities and functionality through your mobile device
- Ensure the right alternative foster care placement is made
- Obtain key information and context
- Configure a complete solution to fit child and agency needs
- Native design supporting Android and iOS

User-centered design

Diona Placement Finder was developed based on direct input from caseworkers and foster care agencies, using integrated user-centered design methods. Additionally, Diona's design team includes experts with social worker experience and domain knowledge, producing a solution that is truly end-user focused, while adhering to best practice design standards for mobile operating systems.

The Diona difference

Diona solutions transform Health and Human Services delivery with differentiated capabilities:

- Suite of commercial off-the-shelf (COTS) enterprise solutions that bring together devices such as mobile phones and tablets with agency case management and eligibility systems
- Platform architected from the ground up to be secure, robust, scalable, and reliable today—and future-proofed against new requirements and rapidly-evolving technologies
- Deep domain knowledge embedded within the design which connects and extends back-end agency systems and processes

About Diona

Diona provides innovative systems of engagement solutions to government Health and Human Services, Social Care, and Social Security agencies and NGOs around the world. Diona's family of social program engagement solutions turn mobile devices—such as smartphones and tablets—into tools to achieve better outcomes by helping agencies serve people more effectively, while improving how their employees work and collaborate.
