

Spatial Data Platform Built for Enterprises

Discover how better map data can add value to your business operations with NextBillion.AI.

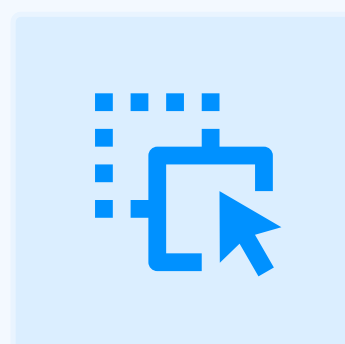

“NextBillion.ai offers mapping expertise that can be quickly customised to suit different business needs. They were able to swiftly integrate our proprietary data set and provide a tailored solution.”

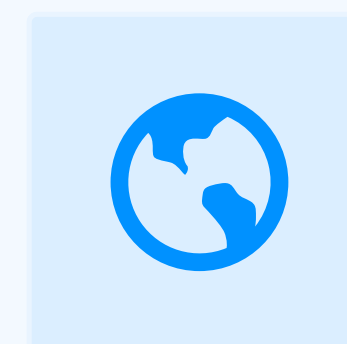

Jebu Ittiachen, Chief Architect, Freight Tiger

Solutions built for core business differentiators

Faster time to market and downstream integration

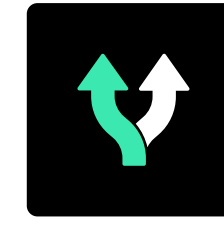

Scalable and extensible location data platform

Complete mapping toolkit to power all your applications

Map Data as a Service

Comprehensive mapping platform with authoritative data solutions that helps you merge, manage, process, enhance, and edit location data. Unrestricted integration capabilities — any data type, volume, or source.

ETAs and Routes

Get access to accurate data and AI-driven estimates. Suitable for any location-based use-case across industry and geography. Round-trip latencies are 3X lower and can support 40x higher throughput.

Map Tiles

Wide range of default styles for use-case specific needs. Seamless overlay of public and proprietary data from multiple sources at the SDK level. There are no limitations on data volume, scale or use case

Geocoding and Search

AI-powered APIs created to solve pain-points of transportation and logistics like unstructured delivery addresses. Seamlessly transforms historical data into actionable insights to deliver user-specific search experience.

400K+

kilometers of road mapped

140K+

road restrictions managed
