

# Business Continuity and Disaster Recovery on Azure

A good Business Continuity Plan could not only save an entity from possible financial hardships but could enhance its image and goodwill among clients and stakeholders; such plan could be perceived as a proactive measure towards protecting the entity's own interests as well as those of its customers and partners.

Office Line has an extensive experience in DR projects implementations, having designed and deployed complex Disaster Recovery installations by using innovative software solutions that ensure data protection with cloud backup, in compliance with the new European GDPR regulation. The company also provides Disaster Recovery as a Service (DRaaS).

## Why customers trust Office Line

- ✓ Advanced Specialized Partner for Azure services.
- ✓ Microsoft's Country Partner of the Year for Greece 2019 & 2020.
- ✓ High qualified technical professionals.
- ✓ Empowered with future-proof solutions.
- ✓ Announced from Microsoft as FastTrack Ready Partner for Greece, Cyprus, Malta.
- ✓ Strategic planning & ongoing consulting.

## Streamline BC & DR

❑ Many companies use multiple software products for their BC and DR plan meaning crossover and chaos. Azure makes Site Recovery stress-free from replication, failover to recovery of multiple business workloads and apps from a one location. Site recovery orchestrates replication and failover but doesn't interrupt your application data or have any information about it.

## Flexible

❑ Azure Site Recovery you can reproduce workloads running on both virtual and physical machines such as Hyper-V virtual machines, VMware virtual machines, and Windows/Linux physical servers.

❑ ASR provides test failovers to support DR checks without disturbing any live production environments.

## Cost-effective

❑ You can replicate to either a secondary on-premises site, or to Azure, so you don't need secondary datacentre. Using Azure as the end point for DR eliminates the cost and complexity maintaining a secondary site, and replicated data is stored in Azure Storage, with all the flexibility that provides.

# Migrate your Datacenter to Azure, to achieve business benefits

## Proof

The company's infrastructure is located at an on-premises Data Center and on Microsoft Azure. The two locations are connected using Site-2-Site VPN. The need for Business Continuity and Disaster Recovery is for the whole infrastructure, both on-premises and on Azure. Using Azure for BC & DR provides a common solution for both on-premises and on Azure infrastructure. We replicated both infrastructures to an Azure Region, different from the production Azure Region. In addition, the backup data are safe and recoverable by backing up to Azure.

## Why Office Line

Office Line S.A. is an internationally recognized leading Cloud Solutions Provider and Digital Transformation company, empowering customers' specific business requirements, while meeting their needs for flexibility, speed, security and reliability. With high qualified professionals holding more than 100 Microsoft Certifications and 16 Microsoft competencies, Office Line ensures customer success and business goals by adopting new technology shifts and accelerating the Digital Transformation journey.
