The desktop is obsolete.

When all your apps are on the cloud, why not your desktop?

Quadra

The way we work is changing

Work from home is an existing trend, that has been greatly accelerated by COVID-19

People benefit from flexible working, and businesses benefit from access to global talent

BYOD is becoming increasingly common: 87% of people access work applications from personal devices

Today's increasing security and compliance requirements place a great burden and add immense complexity to the traditional desktop model
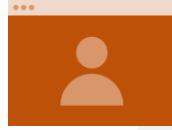

Hybrid work is here to stay.

Every organization needs to have a strategy
to deliver secure and productive remote work

But this is easier said than done with traditional approaches.

Quick, secure and remote set-ups pose real IT challenges.

Enabling remote work

With more being accomplished outside of the workplace than ever before, there is an immediate need to enable secure, remote IT practices that are simple, efficient and can be done from anywhere on any device.

Scaling and capacity issues

The ability to scale quickly and handle the variable server load of a virtualised workforce is critical to business continuity and employee productivity. Additionally, hitting capacity issues at peak usage times can trigger expensive investments in additional infrastructure as well as interruptions to productivity.

Budget and resource constraints

Additional investment in on-premises virtualisation and hardware can be expensive and time-consuming and puts pressure on available IT budgets as well as on human capital.
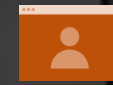

Security and compliance

Meeting compliance requirements and ensuring secure network access remain paramount, especially when employees are working from different devices in various locations.

Windows Virtual Desktop:

Enables working from anywhere, on any device.

Secures your user data.

Deploys and scales in minutes.

Reduces cost and modernises practices.

Quadra Nubis
Desktop-As-A-Service

Optimize your desktop virtualization experience to leverage the power of a modern cloud

Expand capabilities with the best virtualized end-user experience

- Connect to any platform with an experience just like native
- Enhance protocol by adapting bandwidth utilization
- Enable fast VHD load times and log-on times with containerized user profiles
- Drive stronger collaboration with Teams enhancements

Realize more efficient and simplified management

- Unify both Desktop and RemoteApp experiences for easy-to-grasp learning
- Engage flexible user experiences through a single host pool and multiple app
- Utilize automated VM deployment
- Solve errors quickly with simplified but powerful troubleshooting with advanced diagnostics

Ensure security and modernization with a standardized, global cloud

- Reach anyone, anywhere with 54 regions (more than any other cloud provider)
- Rely on powerful cyber defense operations with over 3,500 full time security professionals
- Assign role-based access control to admins

Significantly reduce costs without compromising end user experience

- Decrease spending to only virtual machines, storage, and networking consumed while using the service
- Employ the full Windows 10 experience at multi-session cost
- Absorb the licenses you already own to limit spending

Build an agile enterprise

- Enhance employee experience with reliable, trouble free, high performance end user IT

- Reduce capex and complexity

- Improve application support

- Easily adapt to stringent security and compliance requirements

- Foster innovation in your business through improved employee productivity

Cloud based desktops are the future of end user computing. They pave the way for an agile and intelligent enterprise.
