

We build the data platform for your digital transformation

Many companies struggle to take data-driven decisions or deliver new digital products due to the complexity of their legacy IT and lack of unified data access. New data solutions often result in new silos, and additional master data management issues.

How EBCONT helps to build a foundation for data driven business

EBCONT helps companies build a central data hub that integrates information from across all sources. We leverage AI, machine learning and analytics tools to build new digital products and analytics solutions for our customers – be it a Customer 360°, collecting and acting on IoT data streams, or detecting security incidents.

Actionable

- **We don't build yet another silo**
- Build new apps/products directly on top of platform
- Real-time insights on all your data

Significantly reduce time-to-market for data-drive products and decisions

Full Lifecycle, delivered

- **EBCONT covers all project phases**
- Project management
- Data strategy consulting
- Software development & DevOps
- Managed service for your solution

Turn legacy data into business value

Why businesses choose EBCONT

- Delivers both the platform and the user experience
- Customer-centric approach
- Broad expertise
- Enterprise grade quality
- Full lifecycle offering
- Privately owned Austrian company

Customer-centric

- **Proven project delivery model**
- Short, agile implementation cycles that deliver an incremental MVP
- Focus on business needs

Gain a 360° view of your company and its customers

EBCONT chooses partners very selectively. Strong innovative capability, reliability and maximum commitment to our clients and projects are most important to us.

Microsoft Azure Data & AI solutions allow us to build data platforms for our customers much faster than in an on-premise solution, with unprecedented stability and scalability.
