

Human Centric Innovation

Driving a Trusted Future

Springboard
for Azure

shaping tomorrow with you

Springboard for Azure is a framework combining Fujitsu developed Infrastructure as Code assets and leading Azure professional services know-how, delivered using Agile and DevOps, that allow you to migrate, build, and innovate at pace, with the controls, security, and guardrails that enterprises require built in.

Accelerate digital transformation with Springboard for Azure

Innovate faster

Develop new solutions faster with quality IaC library and Landing Zone templates.

Save Costs

Save both money and time - your Landing Zone up and running in days instead of months.

Create Value

Focus effort on your business challenge instead of foundation code and maintenance.

Build your future

Co-create your solution together with Fujitsu Azure experts and Springboard.

Springboard for Azure is your **everything as code** solution

Infrastructure
as Code

Configuration
as Code

Blueprints and
Landing Zones

Pipeline as Code

Springboard for Azure implements the **Microsoft Cloud Adoption Framework** and provides acceleration and value in all the stages of your Microsoft Azure cloud adoption.

Define Strategy

Plan

Ready

Adopt

Operate

This is **what you get** with Springboard

Springboard Artefacts

A collection of Infrastructure as Code components, landing zone blueprints, design templates, and a pre-defined backlog of tasks.

Springboard Project Engagement

Well-defined professional services engagement to rapidly produce your customized landing zone as code, documented, tested, and ready to deploy.

Springboard Support

Ongoing support in using Springboard and updates to the Springboard code library when things change in Azure.

This is how you buy Springboard

1. Springboard Project

Choose one of the three project tiers that define the scope, complexity, and length of the engagement. Choose the one that best fits the solution you want to deploy and **sign the Statement of Work.**

2. Springboard License

The Springboard artefacts are owned by Fujitsu and **licensed for your use.** The Springboard Terms of Use define what you are allowed to do with your copy of the Springboard artefacts.

3. Springboard Support

To get support and updates to the Springboard artefacts you purchase an **annual subscription** to the Springboard Support service.

Springboard delivery has been engineered for **Azure DevOps**. This means hosting your assets in Repos, using Boards for Agile collaborative development of the code-base, defining Pipelines and Test Plans to verify and roll-out Springboard changes, and the Wiki to document your landing zone.

GitHub

The Springboard Support Service is **delivered over GitHub**, providing Springboard customers with a community approach to the common codebase shared by many customers. In GitHub, you can report bugs, ask for new features, request assistance and discuss with peers in other customer organizations.

Starter - Springboard project tier

Springboard tier for Proof-of-Concepts and dev environments.

- Workshop to platform deployed: typically 1-2 weeks.
- Low Availability Requirements.
- No Hybrid network connectivity.

Online Springboard on-boarding Workshop

On-Site Workshop with Cloud Consultant

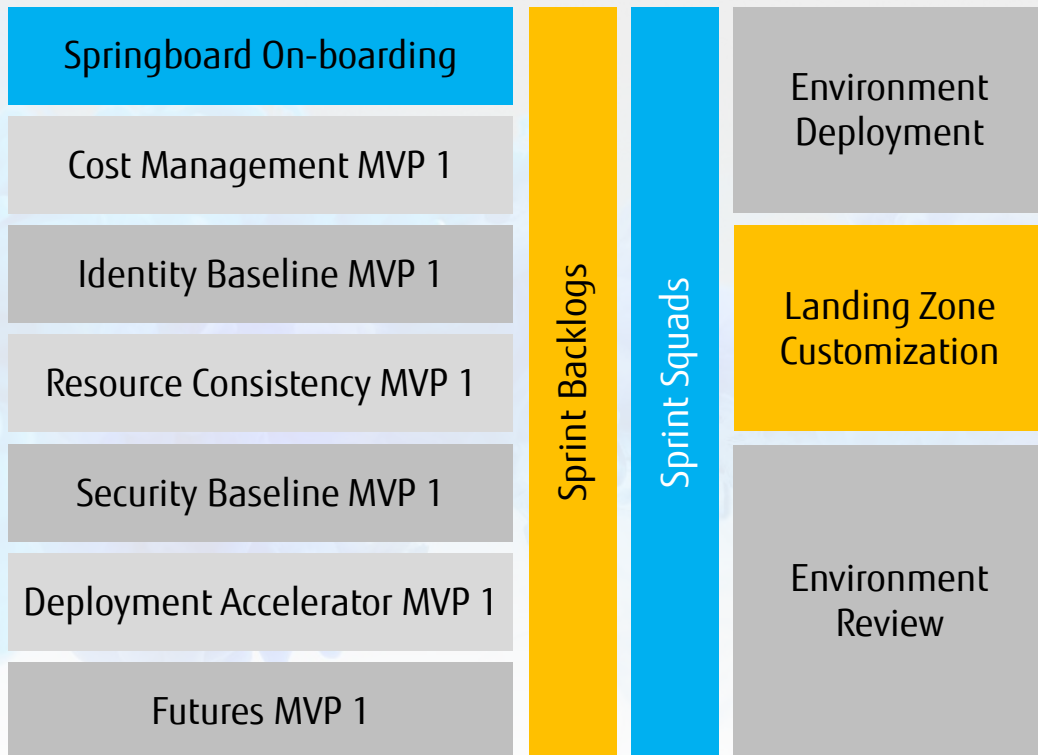

Environment Deployment

Environment Review

Corporate - Springboard project tier

Suitable for larger organizations with a need for a governed and managed environment in Cloud

- Workshop to platform deployed: typically 3-4 weeks.
- Suitable for Production Workloads.
- High Availability Requirements (including zonal).
- Base Hybrid network connectivity.
- Base layer of Security & Governance.

We're in this together

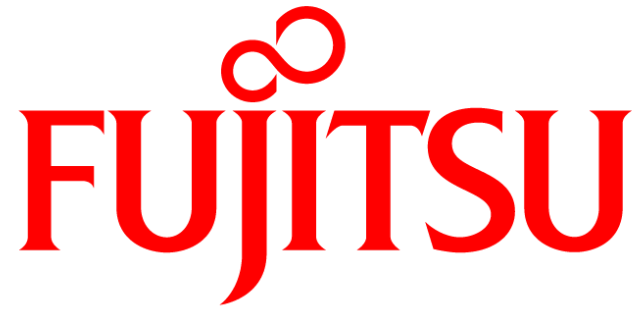

Fujitsu is recognized by Microsoft and Gartner as an industry leading hybrid and multi-cloud service provider. We provide IT service to thousands of customers worldwide, keeping the digitalized world turning. In doing this, we have become experts in how to best to design, deploy, monitor and manage diversifying infrastructure estates.
