

OBOL™ Platform – Tokenization Solution

Obol tokenization solution provides the asset owners a framework to convert their asset into multiple tokens and trade those tokens to achieve liquidity

Cloud Based

Easy deployment on Azure

No Code Solution

User can tokenize their assets without writing any piece of code

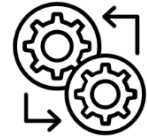

Easily Customizable

Business can easily define digital asset attributes and customize as per their use case.

Smart Validation Handling

Pick and choose contract validation from the list of pre-defined validation templates

Easy Integration

Can be easily integrated with other applications

HCL OBOL™ Platform- Tokenization Solution

Benefits of tokenization/ NFTs:

- Unlocking the value of illiquid asset- With tokenization, one finds a way to realize value of their illiquid asset in a safe and secure manner.
- Fractional Asset Ownership- Blockchain enables to fractionalize assets and to own and perform actions over only a portion of an asset.
- Boosting Operational Efficiency- Blockchain helps in the digitalization and automation of manual work along with the reduction of a part of the reconciliation/compliance work which helps to gain efficiencies in the process.
- Single source of truth- Blockchain based NFTs introduces a single IT layer of trust for allowing business stakeholders to share together their data where multiple actors of an ecosystem can interact with the same digital representation of an asset.
- Transparency- Blockchain introduces transparency by default, as all transactions occurring on a Blockchain infrastructure are accessible to all its participants (limited to the perimeter of a DLT/Blockchain).
