

Azure Governance Workshop

ToonVanhoutte

Toon Vanhoutte | CTO @ Noest | Microsoft Azure MVP

The way forward

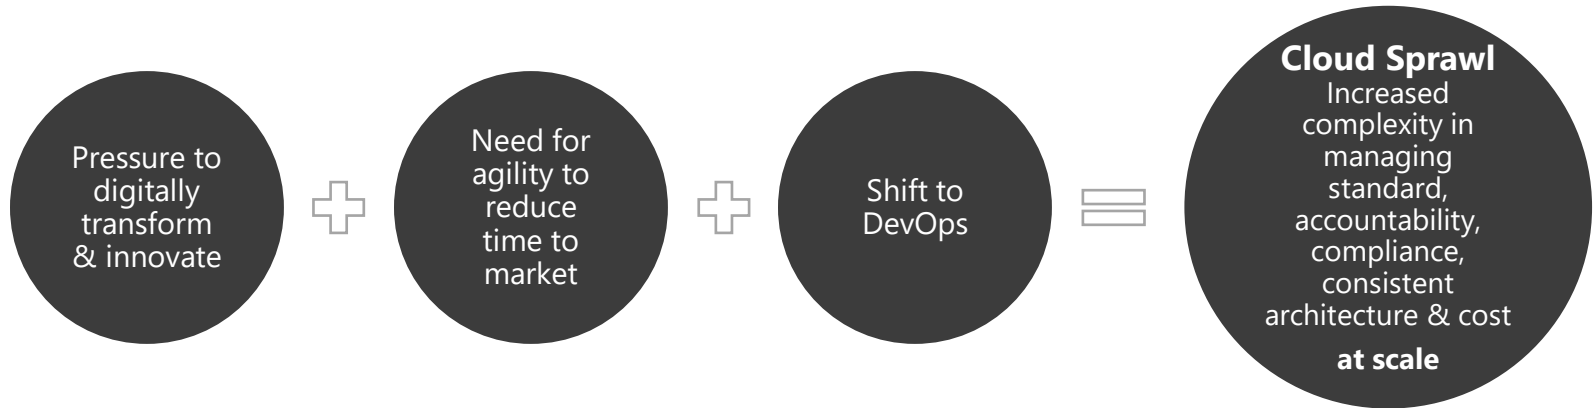

The need for governance

Cloud governance principles

A successful cloud governance must...

- ... be **addressed early** to ensure the successful use of the cloud within the enterprise.
- ... be **automated** when possible. Human behavior is controlled when proper guardrails are applied.
- ... **evolve**. Cloud governance is never complete. It must constantly be evaluated and strengthened.

Why is governance needed?

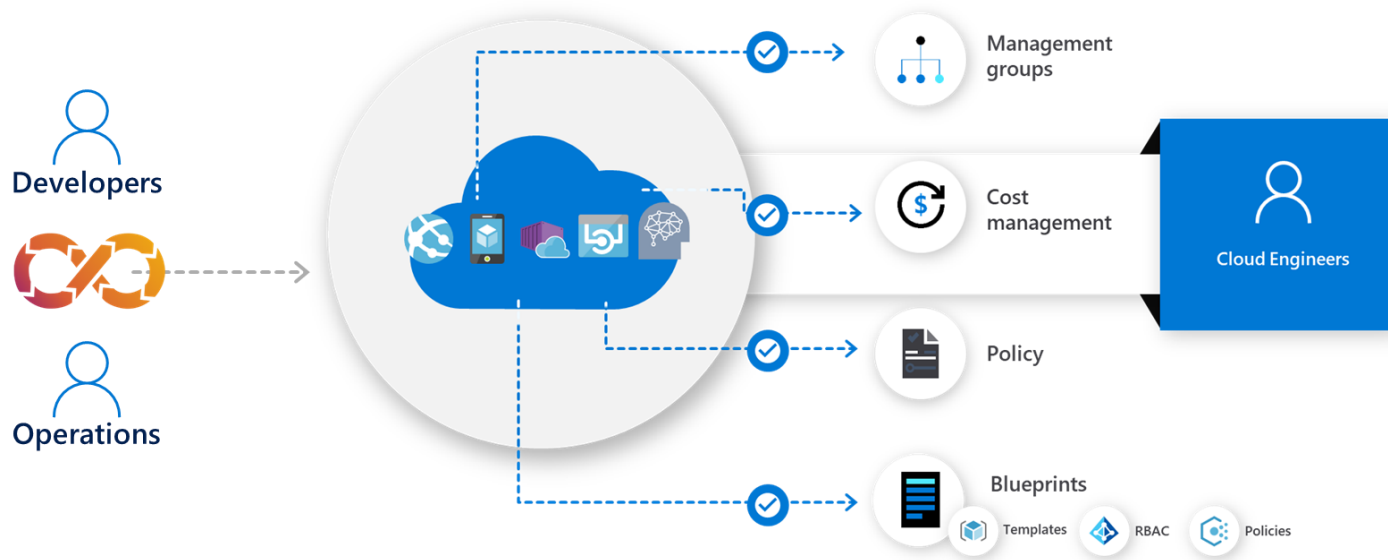

Traditional approach

Central team manages everything

Modern approach

Remove barriers and enable velocity

Other topics from the workshop

Governance tools in Azure

Resource consistency

Cost management

Security & identity

Release Management

Business continuity

Summary

Cloud governance

Five principles

Resource consistency

Ensure consistency across your environments

Cost management

Evaluate & monitor costs

Security & identity

Ensure compliance with IT security requirements

Release management

Accelerate deployment of solutions

Business continuity

Availability & disaster recovery
