

Teams Governance Workshop

Secure your collaboration tools

For most organizations, Governance, Security & Compliance is a pre-requisite when deploying Microsoft Teams – this can delay deployment.

This workshop is designed to eliminate these hurdles by focusing on a Governance, Security & Compliance strategy for Microsoft Teams that is tailored to your specific organizational and security requirements.

What's included in the 3-Day Workshop:

Our trained facilitator will guide your team through the following:

- Control team creation, teams feature management, naming policies, and classification guest access
- Expiration policies, archiving teams, retention, data loss prevention, and privacy in Teams
- Information Protection, auditing and reporting, search and investigation, and conditional access policies

Why do you need a Teams Governance Workshop?

We believe that it is critical to the success of your Teams implementation to establish both security controls and appropriate guidelines prior to implementing Teams in your environment. The governance and security of Teams is just as important as any other piece of the Teams implementation. This engagement sets the baseline for all other Teams rollouts.

Engagement results & takeaways

- **Defined Teams Strategy:** Set of guidelines to build a Governance, Security & Compliance strategy for Microsoft Teams that is specifically tailored to your organization.
- **Recommended Best Practices:** Understand the best practices around the tools and capabilities to develop and execute a strategy to successfully govern and secure Microsoft Teams.
- **Deployment Plan:** Detailed document establishing the guard rails for a secure and compliant deployment governed by best practices.
