

Accelerate your cloud journey with Trifork Cloud PoC

Trifork is a certified Microsoft Azure partner who supports your team during your migration journey to the cloud. By consulting on solutions based on proven methodologies and best practices we accelerate deployments and ensure success with your Azure projects. Gain first-hand experience with cloud solutions, familiarize yourselves with required deployment activities and understand next steps for future application migrations.

YOUR CLOUD JOURNEY WITH TRIFORK

Cloud Assessment

Gain a better understanding of cloud solution, what the requirements for moving to the cloud are and identify a concept of business needs, feasibility and relevant architecture. Review insights from the workshop and next steps for proceeding with a cloud solution.

Time frame: 3 days

Cloud Migration

Move an application to your cloud in under a week during an intensive, hands-on workshop to quickly set up the foundation of your cloud architecture and migrate a first workload. We analyze and target an example application with parameters relevant for a standard migration.

Time frame: 5 days

Cloud Plan

Kick off your new cloud project with a focus on the foundational setup and technical design. Conduct technical analytics setup for big data environments. Work through more complex migration, address specific business cases and architectural needs.

Time frame: 2 months

Cloud Deploy

Trifork provides migration advisory services to help implement the deployment plan via a performance of technical validation and measurement against metrics. Advisory will also lead to regular technical status meetings.

Ongoing

Cloud Optimization

Continue your cloud journey with more managed cloud services, transform to cloud-native applications or look for cost optimizations. Review and summarize key decisions, dependencies and issues and identify next steps for an extensive cloud project. Involve your technical team, end users and decision makers.

Ongoing

Training

Trifork will support you and your organizations adopting new technologies, behaviors and team cultures. Address all end users in your team and adapt to new ways of working to get the most out of your technology investment.

Ongoing

DELIVERABLES:

- Artificial intelligence workshop
- Use case analysis and comparison
- Executive summary & next steps

TARGET AUDIENCE:

- Cloud / IT architect
- CTO, CIO, Head of IT, IT responsible
- AI & machine learning responsible
