

# Modernizing Web Applications with Azure

## Preparing to move your Web Application to Azure

Sela Group provides numerous Azure services, among these we provide web application modernization services incorporating with Azure best practices which helps our customers to maximize the value they derive from their existing applications.

The activities around a modernization of web applications typically includes:

### **Evaluation (Assessment)**

Our team will extract and analyze your current applications and evaluate the readiness and required actions for each application. Considerations include architecture, functionality, services data and performance.

### **Design**

According to the findings we will determine a migration strategy for each of the applications.

### **Prepare**

We will mutually plan the migration pipeline with your teams, emphasis will be given to a clear, coherent plan with capacity planning and an agreed timeline. Business continuation is a top-priority in our plans.

### **Build**

Implementation the design as planned, our team adheres to the Agile methodology and will engage the activities in sprints – aiming at multiple apps per sprint.

### **Ongoing Support and Maintenance**

Our consultants will follow up with you after the migration to check for any potential troubleshooting or rising needs. After the migration is when the work just begins :).
