

**Learn to gain important insights by transforming data into breakthroughs, solving business problems and monitor key performance indicators in real time with our instructor-led advanced Power BI training**

The 3-day training addresses the advanced analytics features in Power BI to allow business intelligence professionals and specialists who want to analyze data, produce, manage and maintain Power BI reports for larger set of users and share insights across all levels of organization. This training on Power BI gives an end-to-end view of important metrics and key performance indicators through intuitive and interactive dashboards- all in real-time, in one place.

Why our customers choose Advance training:

- Bridging the gap between knowing Power BI and delivering the enterprise level BI solution
- Users develop a deeper understanding of how the advanced functions of Power BI can help in solving real business problems and can quickly get answers to all queries and address all the challenges by digging deep into the business data while being both constructive and creative.

Agenda:

- Use DAX to solve metric problems
- Data Modelling and Data shaping
- Use advanced visuals
- Perform advanced transformations on source data
- Set-up, configure and use personal and enterprise data gateways
- Govern Power BI use for large sets of users
- Implement proper Power BI security features, including row level security
- Segmentation & Cohort analysis
- Advanced Data Visualization

*Note:*

The Prerequisites for the workshop are:

Basic Power BI understanding is necessary. You can go through our Power BI Dashboard in a Day Training: 1-Day Workshop to gain a basic understanding.
