# Get ready for your transition to extension with C/AL to Extension Analyzer

Evaluate the scope of your project, ascertain budget requirements and take advantage of expert advice for the next steps of your successful transition.

C/AL to Extension Analyzer is an online service that analyzes Microsoft Dynamics NAV solution in C/AL language, it assesses the compatibility with the Extension in AL language. The service consists of 5 simple steps.

Step 1.
Upload and submit

Step 2.
Review the report overview and purchase the full report

Step 3.
Download the full report

Step 4.
Request a call to walk you through the report

Step 5.
Regenerate report

In just one day, the C/AL to Extension Analyzer Report is delivered, which helps to effectively plan your transition to extension with project requirements.

The report identifies a detailed list of conflicts that you might encounter while transitioning from your current solution to extension. It saves time by eliminating manual code analysis and serves as a backlog for prioritizing and effectively planning your transition activities.

Within the report recommendations are made for resolutions to each conflict based on 1ClickFactory best practices. It boosts developers' productivity and makes implementation easier; they can start working on an exact list of conflicts with resolution recommendations immediately.

A preliminary estimate is calculated which determines how much effort is required to move your solution to an extension. It helps to illustrate the complexity of transitioning to extension. It also helps when building a business case; as you can effectively manage the budget and identifying the risks.
