SR CLOUD SOLUTIONS

Migrate to Azure - Application Modernisation Services

SR Cloud Solutions is a Microsoft Cloud Service Provider (CSP) based in the UK. We specialise in cutting edge technology utilising Microsoft Azure

▶ Azure Design utilising the Microsoft Well-Architected Framework

▶ Systems Integration Consulting Services

▶ Azure App Service and Azure SQL Database expertise

▶ Azure Migration Expertise

Benefits of Application Modernisation

▶ Unleash cloud agility and innovation

▶ Reduce your Total Cost of Ownership

▶ Scale your application using Azure managed services

▶ Identify and scale the parts of your application that matter

▶ Utilise platform as a service components

▶ Quickly deploy new applications

Having made the decision to move to a cloud infrastructure, organisations must form a strategy to migrate their applications. A 'lift and shift' approach to Microsoft Azure can offer significant benefits, but the true value is seen when applications are modernised to utilise Azure platform services. By modernising your applications utilising the cloud you can save money, enhance operational efficiency and improve security.

Through our approach, we help drive application innovation and modernisation using the latest Microsoft Cloud solutions. We apply tried and tested methodologies to help accelerate modernisation, maximise agility, reduce risk and achieve scale faster.

Our team of experienced Microsoft cloud architects and developers work with organisations to migrate their traditional on-premise applications to get the most from their Azure environment, today and in the future.

Microsoft Partner | Silver Cloud Platform
Silver Small and Midmarket Cloud Solutions

Running applications on an aging IT infrastructure can present a variety of business challenges. From time consuming application changes to the costs of scaling, it's no surprise that organisations are migrating to the cloud.
SR Cloud Solutions can help shape your applications to meet the demands of emerging and future business challenges.

Our Approach

Requirements Assessment
Our consultants perform a detailed assessment of your source environment for migration to the Azure App Service or Infrastructure as a Service.

Migration Plan Document & End-User Communication
Our consultants create and utilise a detailed migration plan document and an end-user communication plan throughout the migration process.

Azure Tenant & Resource Provisioning
We provision the Azure target tenant and subscription environment and configure tenant resources.

Migration Execution
SR perform the Azure App Service and Azure SQL Database migration as per the migration plan document.

Developer Training
SR can provide basic training to Web App developers on how to use the Azure App Service.

Ongoing Maintenance and Support
Our specialist team of UK based DevOps engineers are on standby 24/7 to assist you in the smooth and efficient running of your businesses key web services.

4 Application Modernisation Services

Maximise Agility
Transform your existing applications to enable cloud agility and innovation on a rapid scale.

Auto Scale
Reduce reliance on aging infrastructure. Scale your applications based on demand and only pay for what you use.

Modernisation
Identify whether you need to refactor, rearchitect or rebuild your applications.

Security
Rigorous security and compliance, including SOC and PCI, for seamless deployments in the cloud.
