

Lower Cost Compute With CloudFrame Relocate™

By Moving Your COBOL Workload

CloudFrame Relocate™ provides an automated, incremental approach to transforming mainframe COBOL applications fast, puts you in control, and can save you millions in MSU and MLC fees.

CloudFrame Relocate is an automated way to move COBOL workloads from expensive mainframe general-purpose processors (GPP) to lower-cost platforms like zIIP or private and public cloud environments like AWS, GCS, and Azure, in as little as three (3) months with no disruption to your existing environment. With CloudFrame Relocate™, customers can take an incremental, application by application approach to their mainframe COBOL compute cost initiatives.

CloudFrame Relocate™ delivers cost savings by moving COBOL compute to less expensive platforms without changing data access or integrations.

Key Benefits

- Incremental
- Fast
- Low Risk
- Backward Compatibility
- Functional and Data Equivalence

1

Lower application mainframe compute costs

- Reduces monthly license charge (MLC)
- Reduce mainframe hardware and software license fees

2

Shift COBOL applications to cloud without the risk

- Utilize existing data sources (no data conversion required)
- No changes to existing processes or integrations
- Guaranteed 100% data equivalency
- Transform COBOL to high-quality, high-performing object code

3

Reduce mainframe MIPS usage and batch windows

- Reduce the pressure of tight mainframe batch windows
- Reduce mainframe COBOL MIPS

Benefits of Relocate

CloudFrame Relocated™ primary benefit is a reduction in mainframe cost. But, there are also many other tangible benefits.

Incremental — You're in control; move workloads to zIIP or a cloud platform at your pace

Fast — Automated conversion and generation lead to results in as little as 3 months

Low Risk — Control what is transformed, what remains as is

Backward Compatibility — No disruption to existing data and processes

Functional and Data Equivalence — Guaranteed 100% identical results

Self-Fund Your Modernization Journey

By reducing your mainframe cost, you can invest the money saved into additional application modernization initiatives. This technique can be repeated for each of your mainframe COBOL applications. With CloudFrame Relocate, you can “self-fund” and determine the tempo of your modernization spend.

Set Your Pace with an Incrementally Approach

An incremental approach allows you to set the schedule and pace and eliminates the all-or-nothing dilemma. Big bang modernization projects are no longer necessary.

Control Your Cost

Configurable template driven automation ensures high quality of the transformation products (Java code and services) and reduces the need to have external resources.

Reduce your Risk

With CloudFrame, you can prove functional equivalency and remove long and out-of-control testing and approval cycles. The ability to utilize mainframe data sources and existing processes helps to mitigate risk and accelerates modernization outcomes.

About CloudFrame

CloudFrame frees mainframe applications from COBOL, giving customers automated, incremental, low-risk, low-cost ways to transform those applications into fully supportable cloud-native Java. Our products give customers control and the ability to transform mainframe applications fast, freeing them from COBOL and vendor dependency completely and fully enabling digital transformation.
