

Cloud Readiness Assessment

Your Cloud Strategy, Optimized for the Future.

Application Modernization with Azure

Setting Goals

What are you trying to achieve?

- A desire to close their data center or co-located hosting
- Scale on demand
- Lower Costs
- Reliability
- Geo-redundancy
- PAAS tooling only available in the cloud

One of the common problems companies have while moving to Azure is a lack of understanding what goals are driving their business towards the cloud.

Understanding Success

What does success look like?

- Cost savings through deploying to Azure
- Capital expense reduction related to buying hardware & software
- New capabilities available in Azure to modernize your legacy applications
- A modern deployment environment for future digital execution

Understanding the outcomes of moving to the cloud helps you communicate what is important, establishes priority and drives accountability.

Moving Forward

How do you proceed?

- Develop a clear understanding of your current state apps & infrastructure
- Determine operational capabilities
- Analyze the future state vision
- Identify the short-term wins
- Map out the action plan of the move to the cloud

Once the actionable items are established and it has been determined how they can be measured, it is time to create a roadmap to success.

The Cloud Readiness Assessment

Your Cloud Strategy, Optimized for the Future.

Current State Discovery

- Document current software architecture and infrastructure
- Examine non-functional requirements
- Define domain constraints

We work with you to understand your current environment.

Desired State Exploration

- Discuss your desired state
- Review short- and long-term strategy
- Learn about your operational capabilities

Make suggestions to help you understand the possibilities

Assess and Recommend

- Map out your ideal cloud deployment
- Identify any potential road blocks
- Determine a proof of concept for initial cloud deployment

Document results and map out a plan of execution

Our assessment delivers a cloud modernization strategy which will help your company drive future innovation + growth.

SafeNet: Cloud Readiness Assessment + Microsoft Azure PAAS

Set the stage for your future digital execution with a plan to take advantage of the flexibility, reliability, scalability and increased security of Azure.

Solution Alignment

Cost

Identify significant cost-savings over on-premise infrastructure.

Agility

Enable near-instant provisioning of resources resulting in faster project execution.

Service Quality

Significant improvements in performance, reliability and security.
