

SAP to Azure – a customized PoC for your company

A highly optimised PoC where you and your team get hands-on skills and know-how to accelerate SAP applications on your Azure platform. Trifork together with SAPBASIS will consult your team on target SAP applications and its design and configuration to migrate to Azure. Gain first-hand experience with cloud solutions, familiarize yourselves with required deployment activities and understand next steps for future SAP application migrations to Azure.

AGENDA:

1. Exploration

Review and discuss target SAP applications and requirements. Examine relevant architectures and use cases.

Time frame: 3 days

2. Discovering Design

Work through detailed design considerations on implementation topics, such as: as-is and to-be SAP application landscape architecture, migration strategy, Azure project structure, network architecture, identity access management, resource management, user and group provisioning, billing, monitoring, and security policies. Take into consideration best practices and typical pitfalls to avoid.

Time frame: 5 days

3. Deploy SAP Application

Break-out into working teams to set up SAP-specific foundational elements and deploy agreed-upon SAP application on Azure. Perform technical validation and measurement against metrics.

Time frame: 2 months

4. Next Steps

Review and summarize key decisions, dependencies, issues, and lessons learned. Identify open questions, action items, and recommended next steps for undertaking an extensive cloud project.

Ongoing

DELIVERABLES:

- SAP on Azure landscape architecture design document
- Agreed-upon SAP application running on Azure
- Guide summarizing system build and technical operations
- High-level migration plan and summary of next steps

TARGET AUDIENCE:

- Cloud / IT architect
- CTO, CIO, Head of IT, IT responsible
- SAP responsible

PRICING:

Pricing will be agreed between the customer and Trifork
