

A CUSTOMER SUCCESS STORY

How Trifork and Sapbasis migrate one of Europe's leading retailer's SAP to the cloud

ARE YOU STILL WORKING ON PREM?

Why Cloud?

The public cloud is transforming IT and businesses and has established itself as a leading platform to run mission critical applications including SAP. Traditional benefits of the cloud – superior scalability, flexibility and lower costs – are among many reasons why migrating your SAP to the cloud is beneficial for your business.

Why Trifork?

Trifork is a certified Microsoft partners but also cloud agnostic by nature. We help you find the right SAP landscape architecture, explore suitable cloud choice and consult you throughout the SAP deployment together with your operational team.

Read here about the successful cloud transition and how SAPBASIS together with Trifork have covered the entire process from design, to development, to implementation and to operations of an innovative digital solution – delivering a strong value proposition in the full life cycle of the digitalized enterprise.

«With the expertise from Sapbasis and Trifork, we were able to customize our own solution from head to toe. They helped us moving our complex and unsupported hybrid architecture into a cost-efficient and flexible cloud host – everything on time and remotely – in times of Covid!»

- VP leading retailer Denmark

THE CUSTOMER SUCCESS STORY

The Challenge

The retailer's existing SAP architecture challenged the Sapbasis team by being hosted at a 3rd party center and by being heterogenous: A mixed landscape of virtual but also physical servers of which some OS/DB platforms were already or close to being unsupported. With SAPBASIS' expertise this hosting model was to be optimized into a cost-efficient, flexible and transparent cloud solution for future businessprojects on the client's preferred cloud of choice.

The Solution

With their know-how, SAPBASIS could successfully deploy IaaS in the landing zone which was developed for the migration. The usage of different transfer technologies such as gsutil helped optimize downtime and safeguard data transfer from 3rd party hosting to Google cloud. The alignment and automation of IaaS promise future projects to be easy, fast and predictable.

The Result

All key systems were migrated successfully to the cloud. The OS/DB platforms were upgraded to new supported versions and aligned for future maintenance. The architecture was modernized and streamlined to secure structured and safe operations of the landscape. Technical knowledge was transferred to customers own operational team.

Conclusion

With their expert knowledge on SAP-systems, SAPBASIS together with Trifork, were successfully able to complete the SAP migration to the retailer's preferred cloud. During their step by step cloud journey, Sapbasis worked alongside Google to help the retailer's own operational team gain first-hand experience with cloud solutions through customized workshops, familiarize themselves with required deployment activities and help them determine the design and configuration for migrating – all on time
