Spark Enterprise Logic Cloud one-pager

... an accelerator, a totally new way of bringing product to market

Prepare your Excel file	Complex calculations / Business logic
	Your business applications

Excel is *the* common business language across *all* insurance product functions. With our no-code solution, **Excel** models can be converted into a functional API end point in **seconds**.

With the **API endpoint**, IT teams can directly take **product logic** and connect with quotation, policy administration and illustration systems with a **significant reduction** in requirements gathering and development time.

Key differentiators

Updates are easy as:
1) Make change in Excel
2) Upload
3) Review the change!

Platform and system agnostic with the ability to integrate with legacy systems

Strong focus on testing and validation with unit and bulk testing and comparison capabilities

License driven model – clients have full flexibility post-implementation without Coherent support

Scalable deployment options – cloud, on prem offline
