

Power Platform Capacitation Program

ENABLING ORGANIZATIONS
THROUGH
BUSINESS-READY
CLOUD SOLUTIONS

SHIFT CONSULTING

1. ABOUT SHIFT:

Enabling businesses to achieve more through business-ready cloud solutions.

2. SHIFT PRESENCE:

3. Power Platform Capacitation Program

Deploying a Low Code strategy in the organization requires an holistic approach from develop technical abilities, deploying tools, setting up governance models and program management.

Some common pitfalls in Low Code adoption include redundant data sources across the organizations, user frustration due to the lack of deployment strategy of the apps and multiple versioning, and lack of internal creators, among other issues.

These issues can undermine your intention for wider adoption of low code strategy in the organization.

Over the years and in coordination with Microsoft, SHIFT has developed a multidisciplinary approach on how to deploy a low code strategy in your organization. This framework addresses basic concerns such as training according to different maturity levels in the organization, but also defining an application lifecycle model for low code to determine the process to create and deploy apps, defining governance mechanisms such as who can create a data source in the organization, prioritizing of ideas and resources to defining components libraries while proving change management, program management, and online support.

Power Platform Capacitation Program goal is to have organizations becoming autonomous in developing most if not all apps in an enterprise grade environment where there are rules on how to organize everything from the data sources to how you name objects among other rules such as roles and responsibilities.

This approach is done in strict coordination with IT departments so they understand how they can control the application lifecycle deployment and determine rules to guarantee quality avoiding redundancies in the applications.

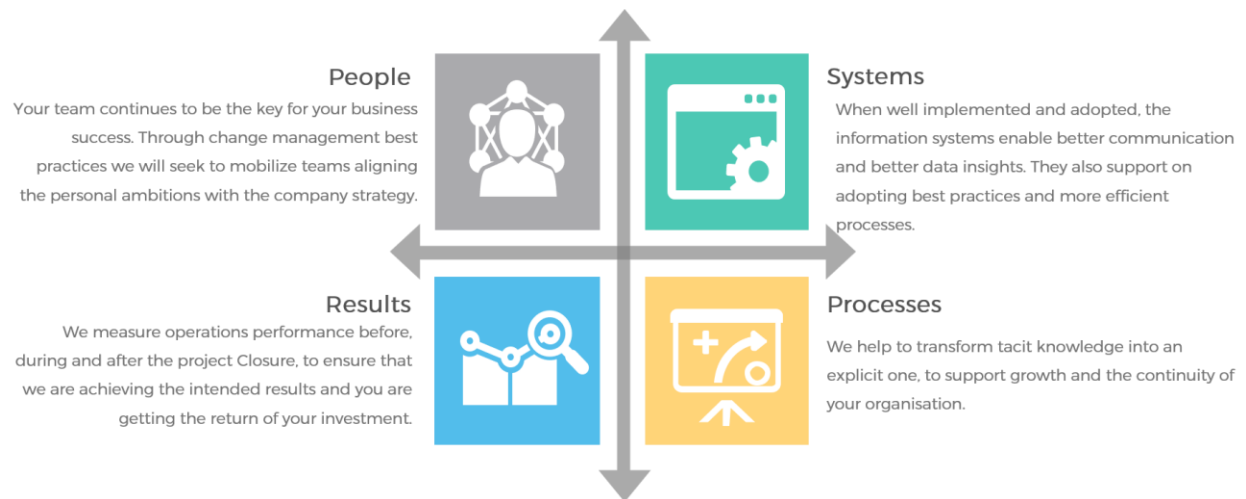

Additionally, this program also caters for training and change management initiatives to assist your team in gaining competencies and deploying apps.

Agenda:

1. Run an initial training to understand the potential of Power Apps.
2. Run one or more design sessions to qualify the business opportunity.
3. Run internal skills and maturity assessment.
4. Training and framework implementation.

4. HOW WE WORK:

Generating project management results is just about having a best of breed tool, but it also about mobilizing people, training in the tool and best practices, defining processes and assisting in obtaining results.

As part of the project online implementation services we also propose services for discussing best practices processes, training and mobilization as per the following deliverable list.

5. TECHNICAL CAPABILITIES:

Currently SHIFT designs and deploys solutions using the following Microsoft technologies:

- Project Online;
- PowerApps;
- Flow;
- Planner;
- Teams;
- Power BI;
- Dynamics CRM;
- Sharepoint.
