

SQL Server Health Check

— for full serverpotential.

Problem: Incorrect SQL configuration

Everything may seem fine with your company's IT environment and its SQL Servers, but problems seldom announce themselves in advance. Giving your SQL Servers regular check-ups is a hygiene factor for a functioning, efficient working life without unnecessary downtime. In more complex IT environments, it's often good to get confirmation that you've done everything right to avoid unnecessary problems:

- Did you set up and configure your SQL Server right?
- Is your SQL Server reliable and secure?
- Does backup and fault management work?

Solution: SQL Server Health Check

A health check-up ensures that your SQL Server is at peak performance. You get confirmation that:

- Installation and configuration of Windows, SQL Server and disks are correct.
- Logging is being performed correctly.
- Database settings and database maintenance are reviewed.
- Backup and restore are tested.
- SQL Server has the correct security and alert levels.
- Cluster analysis is performed, if used.
- Always on/database mirroring is reviewed, if used.

This is delivered in a report after the health check-up:

- A Microsoft SQL Server expert on-site 1-2 days for data acquisition.
- Analysis of information, summary and report with concrete suggestions for improvement.
- A prioritised list of actions to take to solve any problems.

Advantages of SQL Server Health Check

- Help with identifying any problems or errors.
- Fixed price and short delivery times.
- Fact-based documentation for further discussion with any third party vendors.
- Fast, low-cost first action entails low risk for you but a great means of avoiding future problems.

Number of instances. Fixed price excl. VAT:
DB Instance 1 SEK 27,500
DB Instances 2-5 SEK 20,000 per instance
DB Instance 6- request offer

SQL Service Nordic AB is a Nordic leader in high-tech services, training, advice and consulting related to Microsoft SQL Server. SQL Service Nordic AB is one of very few companies that have achieved Microsoft Gold Data Platform Partner status. With our highly experienced and specialised consultants, we provide services and advice at the highest technical level coupled with personal responsibility for all aspects of delivery. We are very proud of our employees, customers and the results we deliver.
