

Digital transformation in school by means of online exams

The COVID-19 pandemic has accelerated the digitization of schools. What was planned for the coming months or years was implemented in many schools over the course of several weeks.

In the era of hybrid and distance learning, more and more teachers have begun their adventure with the Testportal platform. The information about Testportal spread by word-of-mouth and many recommendations by teachers who have already used it before.

In Poland alone, where Testportal has been around for the longest time, over **75 thousand teachers** from different schools conducted

their first tests, 4 months within the start of the pandemic. The **tests were solved nearly 4.5 million times**.

Even though we also offer a dedicated plan to educational institutions, we are focused on the feedback we receive from individual teachers. These suggestions are most valuable to us and allow us to develop the product, in line with the end users expectations.

One of the individual teachers is Mr. Tomasz Mandrysz, who has been using the Testportal platform for over 5 years.

“ I use the Testportal application at least twice a week. I have already conducted nearly 400 tests with Testportal. So far everything has worked properly and everything always works very fast.

The most important advantages of the system are the following: quick access to students' results, possibility of viewing correct and wrong answers, possibility of blocking browser tabs to prevent students from using Internet resources.

This form of testing knowledge is popular with students.

In brief, Testportal is a very helpful tool. It is above all, reliable and fast-operating.

Creating tests is relatively simple and intuitive. I think it is highly recommendable.
