

Build an Identity strategy for the cloud age

Cloud Accelerator

An identity workshop, tailored to your organisation.

Workshop highlights

Assess security posture

Analyse your identity security posture and receive a numerical rating to see how it compares to similar organisations.

Increase visibility

Gain insights into apps used by employees in your environment – even ones unsanctioned by IT.

Optimise identity

Understand how to increase the security posture of identities in your environment through identifying potential risks and opportunities for improvement.

Reduce costs

Learn how to reduce costs by minimising expenses associated to password resets, and improve business agility and security with simplified app access.

Protect user identities

“Identity is the new perimeter. A sound identity strategy is the cornerstone of successful Microsoft 365 deployments.”

Identity is today’s control plane for digital transformation. Organisational barriers are blurring between who is in and out of your network. Cloud apps and the increasing use of personal devices and remote work mean that data is no longer centralised behind traditional network security.

With attacks on user identities on the rise, this workshop will show you how to stop tomorrow’s data breaches by securing identities today.

We will help to assess your identity strategy, find risks in your environment, gain insights on your application landscape, and improve your identity security posture.

Are you aware of suspicious user and sign-in behaviour in your environment? Are you threatened by ongoing suspicious requests?

What to expect?

The foundation of cybersecurity is to quickly and accurately identify authorised users and give them proper access to the information and tools they need to do their job. Our goal is to provide you with tools to protect your authorised users' identities so you can authenticate credentials and manage access while still giving users the freedom to collaborate with others.

We'll work with you to:

- Understand your identity goals and objectives
- Define your existing and desired identity security posture
- Provide insights into applications used within your environment (sanctioned and unsanctioned by IT)
- Showcase core IT and user security scenarios through demos
- Develop a joint action plan based on key results, recommendations and next steps

Who should attend?

The workshop is intended for security decision-makers such as:

- C-SUITE
- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Chief Security Officer (CSO)
- Identity and or Application owners/decision makers
- IT Security
- IT Operations
- Data owners
- Application owners
- Business stakeholders

We'll customise the workshops based on your organisation's needs

Why Fujitsu?

When it comes to identity and access management, you need an experienced partner.

Fujitsu has earned Microsoft's prestigious Identity and Access Management Advanced Specialisation to provide the most regulated and risk sensitive organisations industry-leading solutions that end identity and access chaos, and empower their people to achieve their full potential.
