

Increase security as well as the speed of innovation and development in your business by setting the right policies in the cloud platform

Main challenge

Many companies experience a gap between business rules and cloud governance. One of the reasons is that cloud governance is largely code-based and requires high technical competence to both establish and manage.

PROBLEM

Establishment and management of Cloud governance is largely code-based and requires a high level of technical competence to both establish and manage.

This often leads to governance being downgraded or unnecessarily complicated and costly.

SOLUTION

A simple portal-based solution that the company itself can use to establish and manage policies directly in the cloud platform, without the need for advanced code expertise.

RESULTS

More control that the Sky platform is in accordance with business rules.

Less need to seize valuable and in-demand technical expertise.

Better reporting basis, safer platform and higher efficiency

Cloud Cop

Cloud Cop allows you to easily create and manage cloud governance with the right policies in the cloud platform, so that it is in accordance with your business rules.

Regardless of suppliers, we believe that the company itself should have control over governance in the cloud platform.

1

Implement policies

Create policy sets for your Azure Tenant with associated subscriptions directly from the portal with a simple interface.

2

Maintain policies

Cloud Cop gives you a simple overview of your established policies, so you can effectively and easily change your policies as needed.

3

Follow business rules

You can be assured of policies being established, managed and followed so that you are in compliance with your company's requirements and guidelines.

Microsoft trusted

CloudCop & Microsoft Azure AD

Cloud Cop is a Microsoft approved application and uses Microsoft Azure AD to identify you and your business user.

Use your existing Azure AD account

CloudCop & Azure Lighthouse

Cloud Cop uses Azure Lighthouse for delegation of access, so you can at any time have control and overview of the product's rights, what resources are used and what tasks can be done.

Better visibility and control of the suppliers

CloudCop & Azure

Cloud Cop is a robust and secure solution to help your business manage rules directly in its Azure tenant with subscriptions.

Everything happens and stays in your subscriptions. No supplier "lockin"

Just a few clicks away from added value for your business
