

# CLOUD READINESS ASSESSMENT

## DATA MODERNIZATION

Cloud adoption is always a challenging undertaking; hence Seven Seas and our services which will address, guide, and assist to resolve concerns or questions around compatibility, security, and manageability of your footprints in cloud. Our Cloud readiness assessment includes discovery of your existing MS SQL Server estate which includes the application servers that access your SQL database servers. Our seasoned solution architects would timely analyze in detail the data retrieved from your environment and advise or come up with recommendations to avert potential roadblocks along with laying out a prospective action plan to resolve all concerns and ensure that each step in your transition journey to the cloud is undeterred and smooth will not stop here.

Microsoft End of Support announcement for SQL Server 2012 brings challenges in terms of innovation, cost, security, and regulatory compliance. Upgrading to the latest version of SQL Server will result in additional investment followed by database migration, however, not every organization is prepared for it. An upgrade or migration to the latest or higher versions are recommended since SQL Server 2014 is next in line (extended support due by 07/2024)

Migrating to cloud removes challenges of Security, administration, and business continuity while providing exceptional cost savings and scalability to increase and decrease the processing capability.

In this engagement, our subject matter experts in data modernization will perform following activities:

- ❖ Environment Discovery.
- ❖ Migration Assessment.
- ❖ Design Recommendations.
- ❖ Documentation.
