Health Safety

Health Safety

Index

The solution for security
in the workplace.

01.
What it is

What it is

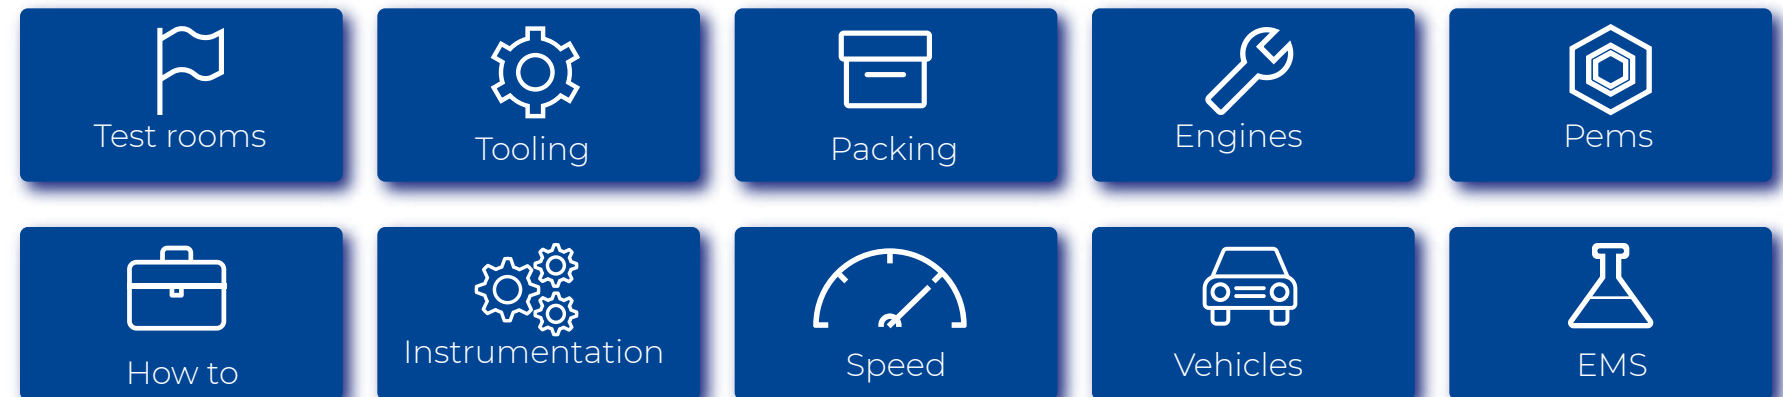

The safety of your business also depends on the safety of environments and people.
A software can help you!

02.

What it does

Safety management in the company

The tool gives you the possibility to plan all preventive and protective measures; you can select an area of your interest to find out which devices to wear.

03. PPE

PPE based on the job

By selecting an area, you can view all the necessary PPE to operate internally, or divide the PPE according to the task to be performed.

Area

<p>Cotton gloves</p> 	<p>Coating gloves</p> 	<p>PVC Gloves</p> 
<p>Leather gloves</p> 	<p>Shoes</p> 	<p>Safety goggles</p> 

Danger Area

Warning!
Wear your
safety shoes

04.

Alert

Missing PPE

You can set up and receive specific alerts at the entrance of a specific workplace, if, for example, the worker does not wear the PPE provided for entering that area.

All this is possible thanks to a system of "tagging" of PPE and antennas that allow you to identify the protective devices worn by the user in real time.

04.

Alert

Safety First

You can set up and receive alerts if a worker falls to the ground. The tag system, placed for example on the helmet or shoes, is capable in fact to identify the orientation of the user wearing it and understand if this is in a horizontal position.

Warning!

A worker is on the ground in the equipment area!

05.

Benefits

Manage workplace safety

1

Decrease
entrepreneurial risk

2

Economic advantages:
days of absence are reduced
due to injury or illness

3

Improvement
the corporate climate,
better productivity

4

You know what
happens in the company

THANK YOU
