

Carbon60 works with businesses at every stage of their cloud journey.

Whether you need to expand your cloud environment into a new geography, meet governance or compliance standards such as SOC2 type 2, PCI-DSS or HIPAA, scale your platform to meet users' demand or undergo a security audit, Carbon60 can help!

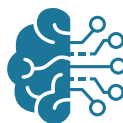

Achieve Success in the Cloud with Carbon60's Clear Path Forward Assessment

Carbon60's Clear Path Forward program includes a two-week technical deep-dive assessment to identify gaps for architectural best practices as well as in-depth implementations required for standard compliance. Our team will conduct a thorough review of your existing cloud environment and provide you with a detailed technical report that contains a clear, actionable roadmap to help your team achieve success in the cloud - be it meeting the necessary security and governance standards and continue to support your future business growth.

How do organizations benefit from Carbon60's Clear Path Forward?

Actionable roadmap to guide you through your cloud journey

De-risk cloud platform misalignment with business priorities

Proactively identify critical cloud platform gaps

Gain better cloud cost awareness

Meet necessary security and governance requirements.

Acceleration of your cloud journey

The Carbon60 Difference

What to expect from Clear Path Forward

PHASE 1: Kickoff Session

We will start with interviewing key stakeholders within your organization to better understand your business goals, priorities, plans and requirements.

PHASE 2: Technical Discovery

Carbon60's team will assess your existing cloud platform, including: Network Architecture, Security Standards, Data Platform, Compute Layer, CI/CD Platform and Operational Best Practices.

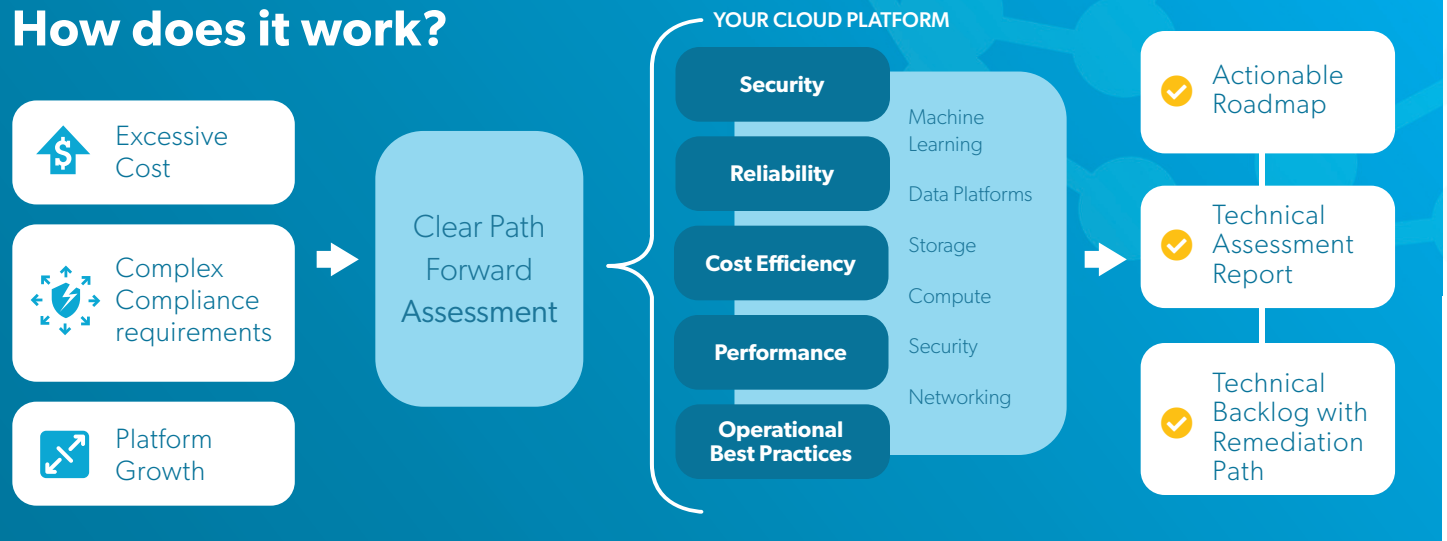

PHASE 3: Architecture Review

We will perform an in-depth architecture review based on the five pillars of Security, Reliability, Performance Efficiency, Cost Optimization and Operational Excellence.

PHASE 4: Report Review

The final report will include both technical and business remediation with a prioritized list of risks and gaps along with a roadmap for you to take action.

How does it work?

ABOUT CARBON60

Carbon60 specializes in delivering secure managed cloud solutions for public and private sector organizations with business-critical workloads. Carbon60 provides secure and SOC2 compliant 24/7 managed services using its cloud platforms across Canada, including AWS, Microsoft Azure and Google Cloud, to deliver scalable hybrid IT solutions. Carbon60 guides customers on their cloud journey and can engage with clients at any stage of their transition. Carbon60 provides cloud adoption frameworks, migration services, application modernization combined with white-glove managed cloud operations and optimization.
