

Veritas™ Enterprise Vault.cloud for Microsoft® Office 365

Assume control over your
Office 365 content and beyond.

OVERVIEW

Veritas™ Enterprise Vault.cloud is a leading cloud-based archiving service that integrates seamlessly with Microsoft® Office 365. It offers the essential layer of functionality you need to meet the rigorous business and regulatory demands for preserving data and enabling rapid eDiscovery search and review.

ENTERPRISE VAULT.CLOUD ADVANTAGES FOR OFFICE 365 CUSTOMERS

Data protection

Mitigates the risks of holding data with a single vendor by providing the reassurance of a secondary copy of your business-critical information in another location. Migrate to new email and collaboration platforms while maintaining legacy content in the archive and providing seamless access to users as needed.

Advanced compliance

- **Satisfies information retention requirements** by journaling an immutable copy of all emails sent and received or other content to a secure and tamper-proof cloud-based archive, without having to place unnecessary legal holds. Even if an end user deletes or modifies a message, an original, unaltered copy remains in the archive according to your retention policies.
- **Retains departed employees' archives** according to your retention policies at no extra charge.
- **Archives content beyond Office 365** including Microsoft® Exchange Server and IBM Domino® emails, Microsoft SharePoint® Server and Box files, instant messages, and unified communications.
- **Addresses SEC—and FINRA—compliance requirements** with optional Veritas™ AdvisorMail, which enables supervisory review of emails, instant messages, and Bloomberg, Reuters, and mobile device communications.

Litigation-ready eDiscovery

- **Accelerates eDiscovery** by enabling authorized Legal, Compliance and HR personnel to apply legal holds in seconds and conduct powerful, iterative searches across an unlimited number of custodians—with no help from IT required.
- **Grants granular, role-based access and permissions**, allowing those involved in a case to perform functions such as managing searches, reviewing items, and creating exports. Case permissions are very granular and include allowing certain legal staff to create searches and paralegals to review items.
- **Captures Bcc and distribution list recipient information**, which is discoverable during searches of both the sender and recipients' archives.

- **Quickly culls down search results** and ensures that the resulting dataset is relevant to the dispute at hand. Built-in collaborative review capabilities can save you considerable legal expenses down the road. Search results can be divided up among multiple reviewers, distributing the workload. Reviewers can quickly identify hit-highlighted search terms, apply review statuses or labels to items, tag content as relevant, irrelevant, privileged, etc., and add notes that can be reviewed by others working on the case.
- **Provides direct integration with the Veritas™ eDiscovery Platform**, offering a complete end-to-end solution, helping you to defensibly solve real-world challenges across the entire eDiscovery lifecycle.
- **Classify archived information and apply tags**, where there are policy matches, to help streamline eDiscovery processes. Enterprise Vault.cloud utilizes the same classification engine as Veritas Enterprise Vault™, Veritas™ Data Insight and other Veritas products.

Streamlined mailbox management

- **Provides true unlimited storage** for a predictable monthly price per user, so you never have to worry about purchasing more storage space.
- **Provides end users with a complete record of their email** without the overhead of a secondary archive mailbox to manage. Users can simply use powerful “search within a search” functionality to quickly find and restore any lost or deleted message.
- **Enables end users to continue sending and receiving emails during an Office 365 outage** with optional Veritas Enterprise Vault™ Mailbox Continuity.cloud (requires Symantec™ Email Security.cloud).

Migration services

- **Streamlines your migration to Office 365** by archiving your legacy data first—whether it is stored on tape, PSTs/NSFs, or trapped within existing on-premises archives. Chain of custody is preserved throughout the ingestion process.

Tight integration with Office 365

- **Automated Directory Synchronization** ensures that each time a new Microsoft® Exchange Online user is created in Office 365, a new archive account is automatically provisioned for them in Enterprise Vault.cloud.
