Azure IoT Fast Start: 4 week PoC/MVP

Fast track your IoT solution to cloud with Mallow

12.10.2021

Mallow

- Is your organization taking first steps to with IoT and cloud? This four-week PoC/MVP will create you a working solution on with upon to build your final solution, with architecture planned for scale and whole pipeline tested from end-to-end. This is the quickest way for you to test your solution viability in the cloud with minimal investment.

WHY

- Need an architecture which is secure and scalable in the cloud

- Test your solution quickly, and see if it is a viable option to further develop

- Faster time to market with our expertise helping you to avoid common pitfalls

- Focus your own development team efforts where they matter the most, get turn key solution from us

- When proper architecture is in place and you have a working model, it is easier for your own team to pick up and continue development when the foundation has been done right

WHAT WE DO DURING THE FAST START

- Interview and spar you with your IoT solution idea

- Create a plan for your IoT solution, what is the functionality and requirements for it

- Create an suitable architecture depending on your needs

- Implement a version which will work from end to end

- Create an overview documentation for the whole solution, which explains function of each components and how they relate to other components and how the data flows in the solution

- Walk through the implementation with you, so you have solid understanding what has been done

WHAT WE EXPECT FROM YOU

- Access to devices and their SDKs

- Idea what you want to test

DELIVERABLES

- Working end-to-end PoC/MVP deployable to Azure

- Architectural drawings

- Overview documentation of the solution and its components
