

Microsoft 365 Insider Risk Management

Managing and minimizing risk in your organization starts with understanding the types of risks found in the modern workplace. Some risks are driven by external factors that are outside of direct control. Other risks are driven by internal events and user activities that can be minimized and avoided.

Insider risk management is a compliance solution in Microsoft 365 that helps minimize internal risks by enabling you to detect, investigate, and act on malicious and inadvertent activities in your organization.

To get you started, 5-time Microsoft Partner of the Year recipient Enabling Technologies provides training and proof of concept services using Microsoft's Insider Risk Management Solution.

Discovery

- Experience to date with insider risk issues
- Content the organization intends to protect
- Sensitive information types in M365
- Governing regulations or requirements around content sensitivity and content stewardship.

Education

- Enabling will deliver three (3) days of training on the Insider Risk Management solution and its component parts.
- Participants should then have a solid understanding of the feature set available to them and how to configure those solutions to meet enterprise requirements.

Proof of Concept

- Enabling will assist the client team in configuring the tenancy for each of the solution components.
 - » Insider Risk Management
 - » Communications Compliance
 - » Information Barriers
 - » Customer Lockbox
 - » Privileged Access Management

COMPLIANCE WITHOUT COMPROMISE

"The problem we're trying to solve is pretty typical. Not enough budget, not enough people, a new threat vector with the automation of hacking tools, and frankly, just not enough bandwidth to chase things down. The totality of all that for us was that we needed to find ways to automate what we were doing in order to solve the problem, not continue to chase after logs." John Michael Gross, CIO, Cascade Environmental

Expected outcome

Insider risk management can help your organization prevent, detect, and contain risks while prioritizing your organization values, culture, and user experience. At the end of the engagement, you will have a working POC utilizing each of the features covered during classroom training. This training and hands-on experience allows organizations to be self-sufficient with the toolset.
