

Application Modernization Assessment

Rationalize your entire application portfolio and identify up to 5 applications for deeper analysis, including a deployable reference architecture and a migration plan.

Aging systems and legacy applications cannot take full advantage of today's customer-centric technologies, like cloud and mobile computing.

KiZAN and Microsoft will help you rationalize your application portfolio and select up to 5 applications for deeper analysis to provide a cost consumption estimate, reference architecture design, and a modernization plan.

The Application Modernization Assessment provides:

Application Portfolio Rationalization:

Analyze your entire application portfolio and identify up to 5 application candidates to provide deeper analysis, including reference architecture and modernization plan.

Microsoft Azure and Cloud Profiling:

Conduct deeper analysis on up to 5 applications to inform modernization plan. Provide real-time data on server and application performance to support a more detailed cloud strategy discussion.

Application Modernization:

Facilitate future planning with detailed performance reporting, virtualization architecture, and support timelines to orchestrate end-of-life transitions and product innovation.

What's Included:

- ▶ Application Estate rationalization and identification of up to 5 applications for deeper analysis
- ▶ Ideation and architecture design session
- ▶ Detailed migration plan
- ▶ Gap analysis for foundational cloud governance principles
- ▶ Azure cost consumption estimates
- ▶ Skilling opportunity for application and data owners

How it Works:

Customers work with Microsoft and KiZAN to define the scope of the engagement, review requirements, align stakeholders, and finalize project timelines.

Phase 1

Discovery & Rationalization
1-2 Weeks

Phase 2

Deep Analysis
on up to 5 Applications
1-3 Weeks

Phase 3

Customer Presentation
1 Week
