TAZI

Do You Have a Profitability Problem?

Need to Identify Which Customer Segments in your book of business are profitable or not?

Insurance companies need to reduce the losses by increasing price at profitable micro-segments and increase profit by lowering the price at loss-making micro-segments. There are many different drivers of profitability such as claim risk, competitor behavior, past pricing actions and demographics. All of these drivers must be carefully considered by an insurance organization in order to monitor the rates closely and accurately.

TAZI allows you to easily create complete solutions that are easy to deploy based on our proprietary machine learning technology and 60 years of combined machine learning and software development experience.

An example is our Profitability and Rate Monitoring Solution, a specific solution that detects the profitable and loss-making segments in your book of business and suggests what pricing actions you should take based on customer behavior and performance.

Thanks to our Explainable AI, you can easily monitor your existing pricing models, whilst C-Suite Executives can keep track of Loss Ratios and Return On Investment.

Introducing
Profitability & Rate Monitoring Solution™
Auto Insurance

Detect profitable segments, monitor your rates, increase your revenue

Auto-Insurance professionals can now use machine learning **safely** and **easily**.

Thanks to our proprietary ML engine, Auto-Insurance professionals can now **interpret results** and **make decisions** in order to boost your profitability in only four weeks.

You can **build your models in minutes or integrate your existing Python models** to further boost performance and your team's efficiency.

Managers have access to **visual sunbursts** that allow them to understand the profitable segments and **take specific actions** that will be logged in the system. Profitability Solution's **customizable ML Dashboards** allow each user to keep track of their key indicators or attributes.

Moreover, you can implement your industry knowledge into machine learning through our **Human in Loop** functionality.

All this built on **self-maintaining algorithms**, allowing accuracy to be maintained overtime with no need for costly maintenance.

At a time when we are surrounded with uncertainty, let our Profitability solution help you monitor your pricing models and prevent unnecessary loss of wealth.
